

CONCENTRACE DROPS

livlong.ca | 1-844-246-5997

WHAT IS IT?

Concentrace Drops are a natural solution that contains the full spectrum of trace minerals needed for the body to perform its daily functions. These minerals are not made in a lab, rather they are extracted from Utah's inland sea. In nature, minerals are present in the exact ratios that are compatible with the human body. The minerals and trace elements in Concentrace Drops are perfectly balanced to provide optimal nutrition for the body, in a bioavailable and easily absorbable form.

WHY ARE TRACE MINERALS IMPORTANT?

Trace minerals are a class of micronutrients that are necessary for the body to perform and sustain basic biological functions. They are commonly referred to as electrolytes and the body requires at least 72 minerals and trace elements to operate optimally. Different minerals work on different organ systems of the body, but the full spectrum is needed for the body to operate harmoniously. Minerals are a foundational piece of cell to cell communication, which provides the blueprint for how the body works. This is one of the main reasons low mineral intake results in dysfunction of biological systems. A mineralized body is a resilient body.

MINERAL DEFICIENCY SYMPTOMS:

- Gut dysfunction
- Fatigue
- Aches and pains
- Poor sleep patterns
- Dry skin & brittle hair
- Headaches
- Muscle cramps & joint pain
- Irregular heartbeat
- Premature grey hair

WHO WOULD BENEFIT?

- Those who suffer from headaches
- Athletes
- Those traveling to humid places
- Anyone experiencing stress
- Individuals who have aches and pains
- Anyone who has trouble focusing
