WORKSHEET

MEASURING THE LENGHT OF YOUR FOOT

To accurately measure the **length of your foot**, you'll measure this standing up on paper and drawing around with pencil. You can use this page for this purpose. Stand on it and draw a good outline of your foot. Then, measure from the back of your heel to your longest point. (This is different for each foot, it can be the tip of your big toe or another toe) That measurement will be your L measurement.

Hop on!

Remember to start your heel shaping when your work measures 2 inches less than your total foot length.
