

The Anorra™ Warranty

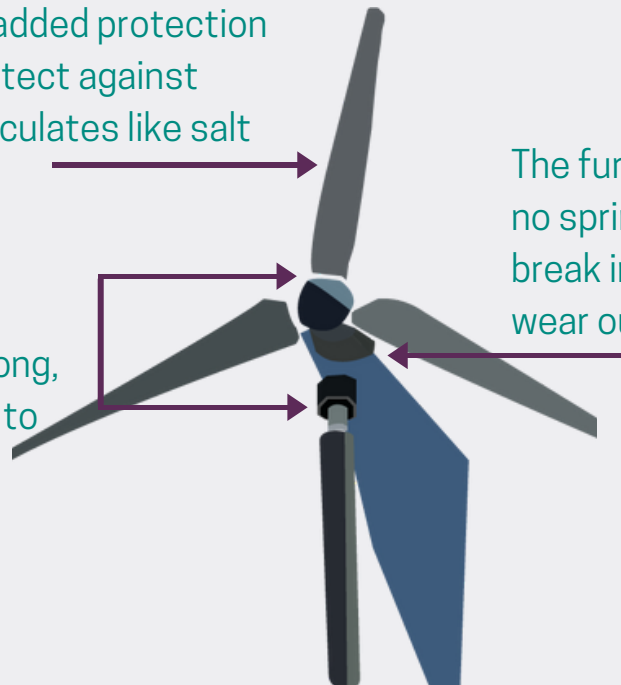

A Turbine You Can Count On for Many Years

The Warranty

The Anorra™ comes with a 10-year bumper-to-bumper warranty. It is designed to operate reliably in the harshest of environmental conditions, with technologies that can go the distance.

Carbon fiber blades have added protection on the leading edge to protect against erosion from air born particulates like salt from sea spray.

Components are made of anodized aluminum and galvanized steel to be strong, lightweight, and resistant to corrosion

The furling system contains no springs or coils that could break in cold conditions or wear out overtime.

The warranty protects the blades, turbine, furling system, and yaw system. Extended warranty options are available and details can be found on our [website](#).

Designed for Canadian Climates

The Anorra™ turbine exceeds the IEC 61400-2, ASTM B117, and CSA 537 (190 km/Hr) standards for extreme-weather worthiness and corrosion resistance.

The turbine has been independently tested at temperatures down to **-50 degrees Celsius** and wind speeds of up to **220km/h**. So when it gets cold, your turbine will keep generating power to keep you warm.
