

ProAiir Dips is
CPSIA, CSPA certified

FYI - It's NOT suggested to use as eye liner (over or under).
DIPS is NOT for Background Sponge Applications-brush only.
Caution - Pink may stain skin/adding white will help not to.

DIPS is a hybrid concentrated formula created for best coverage on skin which holds up to HOT temperatures, sweat, water and most activities. *DIPS* will last longer than traditional cake makeup but is NOT permanent. Dips will dissolve over a period of time naturally and removal is LIQUID SOAP. Not water.

DIPS is not like any other makeup on the market, some learning curve is needed - but the results are great!

Use *DIPS* as your line work over cake makeup, powders or straight onto skin.

You may need: mister bottle of 99% alcohol (try our thinning formula too), an old makeup cover lid or some plastic pallet tray for blending. (Youtube: <http://youtu.be/zedtw1YuHv0>)

Tips:

- Apply to clean skin - give bottles a GOOD shaking then first then burp cap.
- White needs extra shaking, the longer you shake you'll hear it thicken.
- Notice paint cracking, it's applied to thick, thin little with alcohol.
- Pour into a smaller container to avoid spilling, (best if it has closing lid)
- Based on your personal brushing preference, loading can be different:

Some prefer straight from bottle, while others may thin on pallet.

As seen in picture, mist alcohol on pallet and blend your brush/makeup together to your liking.

This can be the method to blend two colors together (like split cake method).

Extreme heat *DIPS* will thicken or dry but can be re-activated with your mister. Keep covered when not using.

- Cleaning: NO water!! Either allow to dry naturally (won't harm bristles) or rub LIQUID soap thru bristles and wipe clean with paper towel. NO more messy water cups!

ProAiir-DIPS is your battlefield makeup to combat those difficult weather jobs!
