

# ProAiir Hybrid Instructions

## Application

- Shake well before use.
- No thinning needed. ProAiir is ready to spray right out of the bottle.
- Apply on clean skin, free of sunscreens or lotions.
- Airbrush with pressure at 15-20 PSI. In extreme heat, increase to 20-25 PSI.
- Overlay / Mix ProAiir colors to create new shades and tones!
- Apply in thin layers to avoid cracking.

## Removal / Cleaning

- Remove from skin by lathering liquid soap into your design, then rise with water. Soap FIRST, then water.
- Clean your airbrushes with 91% alcohol or denatured alcohol. **NO WATER!**
- For clothing, soak in alcohol and dab with a cloth to get as much color out as you can.

## Longevity Factors

- All skin types are different. One person's design may last longer than another simply because their skin exfoliates faster or slower.
- If a client has been consuming alcohol, their designs will come off faster because the alcohol will sweat through the pores, causing the removal of the makeup.
- If you want your designs to last a little longer, apply a thin layer of ProLong to your art.

## Special Notes

- Separation of pigments is normal. Pigment will settle to the bottom of the bottle over time. Simply shake until blended again.
- Do not apply on sunburnt skin, open wounds, or sores.
- Use plastic bottles for best results (or just the ProAiir bottles). Glass bottles attract heat, curing faster evaporation of product causing it to get thick.
- DO NOT mix ProAiir with water. Make sure to empty the water trap after each gig if you are using a compressor.
- Clean stencils by soaking in alcohol and gently brush away the makeup with any soft bristled brush.
