

Universal Adaptors

VIPSeal® Universal Adaptors are manufactured from high quality EPDM and are ideal for connecting rainwater or waste pipes to 110mm pipes or gully traps.

Universal Rainwater Adaptor

The VIPSeal® Universal Rainwater Adaptor allows for a direct connection between 68mm round and 65mm square downpipes to 110mm drainage pipes. The design is perfect to allow connection directly to surface water drains or gully traps from downpipes.

Universal Waste Adaptor

The VIPSeal® Universal Waste Adaptor allows the connection of 32mm-55mm pipes to 110mm pipes. One end of the adaptor can be easily cut to accommodate the diameter of a pipe from 32mm to 55mm. This allows external waste pipes to be connected to a surface water drain or a gully trap to complete an underground drainage system. It can also be used as a stopper to block debris from entering a drainage system.

Benefits

- Universal Fitment
- Manufactured using an ISO 9001 Quality System.
- Manufactured from high quality EPDM
- Suitable for gravity drainage and sewerage applications
- Suitable for multiple pipe materials

Material

- EPDM Rubber
- Manufactured in accordance with BS EN681-5
- Resistant to Ozone
