

# JUNG PUMPEN MULTICUT SEWAGE PUMPS

## APPLICATION

Centrifugal submersible sewage pumps fitted with the MultiCut cutting system are used as stationary appliances in pressurised drainage systems for discharge in sparsely populated areas or of detached houses. They are suitable for pumping domestic wastewater with the usual additions (as specified in German standard DIN 1986, Part 3).

For pumping from ducts which are connected to the public sewer system, explosion-proof submersible pumps may be used. On account of the upstream cutting system, the pressurised line as from DN 32 - as from DN 80 minimum without cutting system - may be routed parallel to the terrain.

Operating conditions up to a temperature of the material to be transported of 40° Celsius

Submerged motor:  
Continuous operation (S1)  
Emerged motor:  
Intermittent operation (S3)  
(e.g. 20% = 2 min. operation,  
8 min. break)

## MULTICUT CUTTING SYSTEM

The unique MultiCut cutting system ensures a maximum of operational safety at outstanding delivery characteristics. Fitted with a cutter plate made of hardened stainless steel and a three-bladed knife, it disintegrates coarse additions in the wastewater with more than 62,000 cutting processes per minute before they can get into the pump hydraulics. Solids which cannot be transported are rejected outside of the pump by the cutting rotor as the cutting system is located upstream from the pump hydraulics. Specifically arranged grooves on the cutter plate ensure additional safety as the cutting unit is permanently cleaned automatically during the delivery.

- Cutting rotor with stirring effect
- Plug-in cable connection
- External adjustable cutting mechanism
- Controllable oil chamber
- SiC mechanical seal independent of sense of rotation
- Moisture-sealed cable inlet
- Installed motor protection..
- MultiCut 20/2 M plus
  - 10% less energy consumption
  - 20% less weight as 25/2 M
  - Impeller and replaceable wear plate made from Grivory (fibre-glass reinforced plastic)

## PERFORMANCE

We reserve the right to change specifications without notice Pump performance is subject to ISO 9906 tolerances  
The minimum flow velocity in the pressure piping must be 0.7 m/s according to EN 12056.  
This data is represented in the performance curve as a limit of application.

## SEWAGE PUMPS

### TECHNICAL DATA

#### Pump

Vertical, single-stage, submersible, pump housing with horizontal discharge, open impeller with external cutting system MultiCut - adjustable.

#### Bearings

Common shaft for pump and motor, grease-packed ball bearing.

#### Seal

Silicon-carbide mechanical seal independent of the sense of rotation, oil chamber and artificial carbon mechanical seal or duplex rotary shaft seal to motor compartment, safe to run dry.

#### Motor

Submersible, insulation class F, type of protection IP 68, protected by winding thermostats, automatic activation by control only or - up to 3.2 kW three-phase current - by CEE plug with motor protection upon request, ex-proof types tested by German PTB Federal Agency, ex-proof Type PTB-certified, ex designation  $\text{Ex II 2 G Ex d IIB T4 [20/2 M plus, Ex Ex II 2 G Ex d IIB T4 Gb]}$

#### Materials

Pump and motor housing as well as impeller made of grey cast iron GG (impeller 75/2 and 76/2 made of spheroidal graphite iron), MultiCut 20/2 M plus impeller and replaceable wearplate made from fibreglass reinforced plastic, completely covered shaft with no contact to the pumped liquid, stainless steel hardened (57 HRC) cutting system, special flexible rubber cable.

#### Scope of supply

Sewage pump with or without explosion-proof in keeping with German / European standard DIN EN 12050 with 10 m cable, without plug, without base.

#### Special technical note for 25/2 ME

As the rated output of the motor exceeds 1.4 kW, the permission of the local power supply organisation has to be obtained prior to ordering and commissioning.

### SOFT STARTING DEVICE (ONLY FOR 25/2 ME)

The soft starting device is a resistance starter with a built-in overheating protection in order to reduce the starting current to approx. 33 A. The maximum switching frequency is 10/switching action per hour (at an ambient temperature of 40° Celsius).

This assembly group is installed in the AD 12 ExME control in the factory when ordered. A subsequent installation is not possible.

### Dimensions with pump base (mm)

Typ	A	B	C	D	E	F	G	H	J	K	L	M

22625-08

### FLUSHING TUBE

The flushing tube is screwed into the annular casing of the pump instead of the venting screw. It vents the pump and at the same time cleans the chamber with a jet of water. This bypass causes a loss of performance of abt. 10%.

Some pumps require a minimum head to ensure a sufficient flushing effect (see table):

Pump type	Installation	Minimum head Hman [m]
... 20/2 M plus	straight	15
... 20/2 M plus	inclined	4
... 25/2 ME	straight	15
... 25/2 ME	inclined	4
... 35/2 M	straight	25
... 35/2 M	inclined	12
... 36/2 M	straight	25
... 36/2 M	inclined	12
... 45/2 M	straight	30
... 45/2 M	inclined	30
