TRAILBLAZING LIGHTS

DESIGNED AND
ASSEMBLED IN THE

Since 1989

GOOD FOR THE SOUL

As we were spiraling in the unpredictable - establishing how to keep our factory open, team employed and colleagues safe, wrestling a wildly erratic supply chain, and distance-schooling our daughters - we found our family outside, connected and refreshed, biking together for the first time. Our girls went from tentatively riding on the street to tackling over 15 miles of trail with 1,500 feet of climbing with confidence and joy.

We invited our friends to come along too. Slow races, obstacle courses, jumps. Riding as a kid-pack became our weekend pandemic play-date. The more experienced learned to look at sand, ruts and bumps with fresh eyes to teach and encourage the more cautious or bruised among us.

Biking is for everyone and is good for the soul.

As we return to our routines, let's keep our bikes close and our friends and family closer. Let's celebrate and support the bike shops, dedicated volunteers, and enthusiasts who work to provide trails to ride and smiles to share across this wonderful sport.

Ann-Elise & Daniel Emerson
COO CEO

NEW TRADITIONS

Alexandera Houchin

Nagahchiwanong

//Cloquet, Minnesota, 20 miles west of the shore of Lake Superior along the St. Louis River

Winter creeps in slowly and with his arrival, he brings dark skies and long nights. I usually spend my winter hours in the gym lifting heavy weights to prepare for summer racing season, but tribal fitness centers were closed. What was I going to do? I thought that if I could find a few people to ride bikes with in my community, that would get me through the long nights.

But, how do you invite people to ride bikes on the snow when they don't have bikes? You convince the right people that we need a fleet of fat bikes in our tribal community.

I purchased 5-fat bikes to start our small fleet. I invited people from my tribal community to train for a local winter bike race; 5 women showed up. I believe that this is the start to something powerful and transformative here.

For many of us, riding bikes together was the only social interaction we had outside of our households in months. We spent 10-weeks training for a race. This was the first fat-bike race my nijikweg, (girlfriends) ever participated in. Everyone who started, finished the 15-mile trail race. The ride was big for me too, in a different way. This was the first time I ever got to share ceremony with other indigenous people before a race.

This was the year I really began to comprehend why "the race", whatever race, was so sacred to me. It was my contemporary way of practicing traditional Anishinaabe ceremony. It took a season at home to learn this truth. Although I loved being home, I longed for ultra races.

Ultra racing grand departs were canceled. I feared loneliness would consume me. Despite the distance, despite the canceled events, my ultra-friendships grew even closer. It was this year we turned our friendship into a family, creating our own holidays, starting traditions, and making commitments to each other.

PRODUCT INTEGRITY www.wetestlights.com

WATERPROOF

No you don't ride underwater - mostly, but water is the leading cause of light failures. We are the only lights in the industry that pass a 1 meter submersion for 30 minutes. Engineered to last and perform.

LUMENS

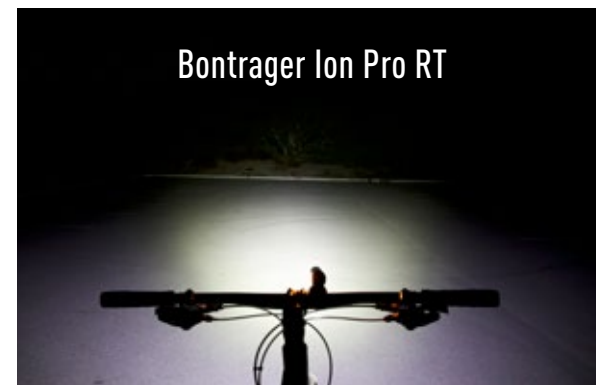

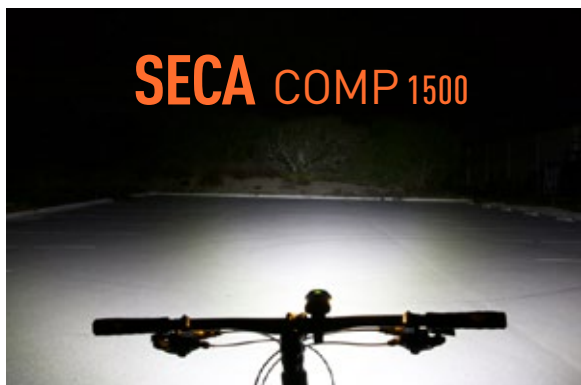

PROVEN TESTED PERFORMANCE

We measure and report lumen output in real-world testing, not theoretical values posted by others. We are the only brand to publish our lumen test results and the brand that pioneered the truth in lumen reporting by driving the industry to certify to the FL-1 standard.

BETTER BEAM

It is not just about lumens, it's where you put them. Our custom-engineered lenses and reflectors paint light where you want it, providing confidence and connection to your path.

SAFEPULSE - SAFER BY SCIENCE

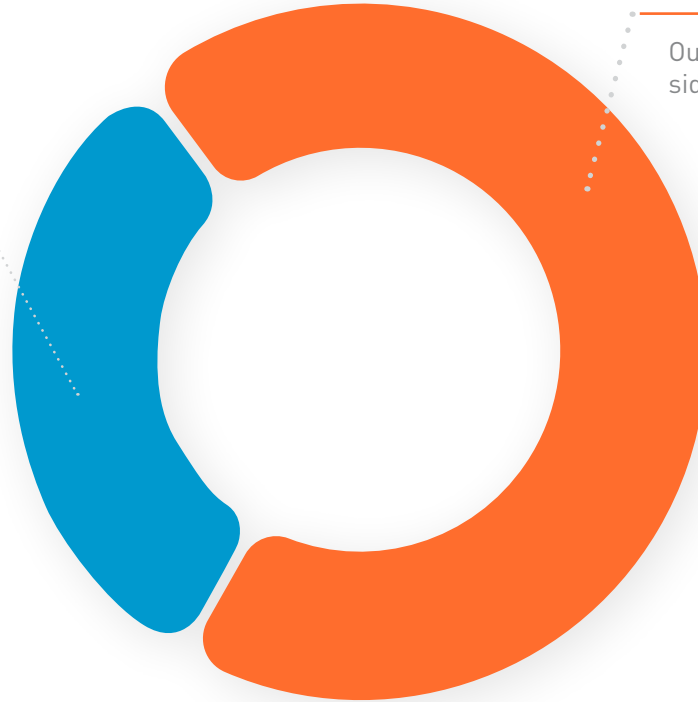

30% OF ACCIDENTS ARE HIT FROM BEHIND

Overtaking collisions are 4 times more likely to be serious or fatal.

We did our research. *SafePulse makes you safer than blinking/flash-ing taillights by allowing drivers to accurately locate you, judge relative distance and safely pass.

70% OF ACCIDENTS OCCUR AT INTERSECTIONS

Our commuter lights have the most powerful side markers in the industry

SAFEPULSE

HONEST LUMENS

We tell the truth and publish the tests results to prove it at www.wetestlights.com

LIGHT YOUR RIDE DAY, NIGHT, TRAIL, ROAD

SECA

The top reviewed trail lights year after year. "The beam pattern alone makes this the best handlebar light available due to its wide, even distribution and spill, says CrankJoy." Seca's Enhanced Trail Sight (ETS), delivers confidence for high-speed riding at night. There may be brighter lights on the market, but Seca's smarter beam design delivers a better riding experience in a lighter weight package.

VIS

Optimal road lighting for confidence when cars are about. Vis gives you plenty of light to see, while providing targeted amber light and red light to the sides to make sure you are seen at intersections where 70% of bike accidents occur.

VYA

Vya knows when you go. Smart lights that deliver remarkable power in an ultra-compact package designed for day and night safety. Vyas are super convenient for daily commuters with their USB blade mount.

BIKES - A CATALYST FOR CONNECTION

Rebecca Rusch

We experienced devastating pain this past year. As an athlete, I looked to my trail experiences to help guide me. Rich Roll once asked me, "what is your relationship with pain?" and my response: "pain is my teacher." It is through hardship and struggle that we strengthen, evolve and grow. This year, my evolution involved embracing stillness and leaning into one of my navigational handrails of "Less = More" with less travel, less movement and more personal, internal development.

2020 reminded us of the need for inspiration, purpose, movement and community. My team and I worked to meet those needs for people worldwide through Rebecca's Private Idaho and the Giddy Up Challenge. We educated and inspired people in 11 countries around the world. Through a revised and hybrid format, along with digital communities, people took control of their physical well-being, connected with a training community and rode with purpose. Bikes are a catalyst for connection, growth and good.

VIS

More visibility, more control, more fun -
the best lights made to see and be seen

VIS PRO1000 TRAIL OR ROAD

Go Light, Go Bright

Our premium compact light charges faster, mounts anywhere and delivers

Battery Indicator

One of the only lights with an accurate battery status indicator and fast charge technology. We won't leave you in the dark.

Waterproof (IP67)

Vis series lights are certified to IP-67 standards - they are tested to be fully waterproof to 1 meter for 30 minutes so you can confidently ride in any weather anywhere.

Be Safer with SafePulse™

Flashing/blinking lights destroy driver's depth perception making riders less safe. **SafePulse** allows the driver to accurately locate the rider and safely pass.

See Better, Be Safer

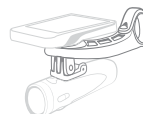

Our side markers make you more visible and safer.

Modular System

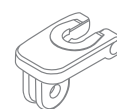

GoPro mounts, helmet mounts, rack mounts, support for Barfly mounts, hand held - Vis is the most flexible mounting interface in the industry and works seamlessly without tools.

GROWING COMMUNITY

Ariana Milelli

Last year my training and goals switched up as my races got canceled. I spent a lot of time riding solo and focusing on myself, and reflecting on how I can get better as a rider physically and mentally. Without work, school, or team practices, I had so much more free time dedicated to riding. I spent time doing training blocks and working on my skills. My friends and I often challenged each other on Strava segments. The thought of racing again one day fueled my motivation.

My community came together when I organized a half-Everest attempt near the end of Spring 2020. My ride inspired others to get out that day and challenge themselves. I completed the attempt by summiting Mt. Diablo 5 times in one day. Covid closed the road to cars which was a blessing to riders.

Despite having nothing on the calendar to look forward to, going out on rides was refreshing and an excellent outlet. Having more people join the cyclist community has united us. When passing a fellow cyclist on the road or stopped at a junction during snack break, everybody is acknowledging and friendly. Sharing these stories across the bike community is humbling and encouraging.

VIS360PRO SMART LIGHTING FOR YOUR HEAD

Visible over 2km

Elevate Your Commute

Wrapped in 360 degrees of protective light while laying down 600 lumens to the road ahead and 25 lumens to those behind - Go big and go home safely!

The Complete Package

- 360 degree cone of protective visibility - the most visible bike light ever designed
- New, more powerful rear light (25 lumens) with **SafePulse**
- Front amber sidelights (Vis Adventure front light has subtle crimson sidelights)
- Waterproof for all-conditions reliability
- Compact system with secure quick release mounts
- Independent rear light control
- Included Mount(s): Front and rear helmet mount (Vis 360 Pro and Vis 360 Pro Plus), head strap (Vis 360 Pro Plus)
