PRODUCT GUIDE 2025.v3

BODY ARMOUR PTY LTD

ORIGIN STORY

Established in 2017, Body Armour is an Australian company born from the shared vision of four friends, offering the perfect balance of 33 years of collective experience in the mining industry, manufacturing expertise, and technical nutrition knowledge. Recognising that proper nutrition plays the most important role in ensuring optimal physical and mental performance, enhanced focus, reduced fatigue and improved safety, our mission is to provide healthy, effective recovery and performance solutions based on modern science.

At Body Armour,

we specialise in the manufacturing of premium recovery formulas that are proven to support and improve the body's recovery process, leading to enhanced performance.

Our promise is our commitment to delivering only the highest quality. At Body Armour, we don't follow trends, we follow data. Every formula we create is rooted in modern science and designed to meet the real-world demands of people to deliver genuine, tangible health and performance results.

We stand as true partners with all individuals and groups who are set on a quest for peak performance and sustained vitality.

"We are on a mission to challenge the large brands who currently provide hydration and recovery solutions. For too long we've been exposed to products filled with hidden toxins, harmful chemicals, and false promises masked in clever marketing.

Integrating effective and quality recovery products into our site's facilities would be a game changer, the data is clear! It is not just a choice, but a strategic move towards ensuring a safe, healthier and more productive environment".

Toni McQuinn
Body Armour Director

Hydration is Only Half of the Equation

Proper electrolyte balance is essential not just for hydration, but for muscle function, nerve transmission, and overall cellular health. As we age, changes in kidney function increase our need for key electrolytes like potassium, magnesium, and calcium to support muscle recovery and maintain bone strength. Getting enough of these vital elements enhance physical performance, support mental focus, and promote long-term well-being.

Hydration Fit for Purpose

Traditional hydration drinks often rely on glucose as a carrier for electrolytes, an effective method developed for endurance athletes where rapid energy is beneficial. But for everyday hydration, it's unnecessary and often counterproductive. Blood sugar spikes cause the body to draw water from its cells to restore balance, impairing cellular hydration and contributing to fatigue and brain fog. Elevated blood sugar also triggers excess urination, flushing out vital electrolytes and leaving the body less hydrated. With sugar intake in Australia at record highs, contributing to obesity, heart disease, and diabetes, it's time to rethink what goes into your drink. The WHO recommends less than 50g of sugar per day, yet many popular hydration products deliver up to 25% of that in a single serve. Real hydration comes from minerals and electrolytes, not sugar.

The Truth Behind 'Zero Sugar'

Many products marketed as “zero sugar” rely on artificial sweeteners like sucralose to maintain sweetness. While technically sugar-free, these synthetic compounds have been linked to gut microbiome disruption, headaches, glucose intolerance, and long-term metabolic changes. That's why we use a plant-based sweetener, thaumatin, a naturally derived alternative that delivers clean sweetness without the artificial aftertaste or potential health concerns. Cutting sugar shouldn't mean compromising your health.

Why Hypotonic?

Hypotonic hydration solutions contain a lower concentration of solutes than the body's fluids, allowing for rapid absorption through the intestinal wall. This means fluid reaches the bloodstream more quickly, making it ideal for preventing dehydration during high-intensity activity or heat exposure. Hypotonic drinks are also gentler on the stomach, with less risk of bloating or discomfort. This makes them suitable for both daily use and demanding conditions, which is why all Body Armour Hydration formulas are hypotonic.

No Colour Is Worth the Risk

Artificial food dyes are commonly used in supplements, drinks, and foods for visual appeal, but they offer no nutritional value. Growing research is now challenging their safety. Numerous studies have linked synthetic colours to behavioural issues in children, liver and kidney damage, DNA damage, gut inflammation, allergic reactions, and potential carcinogenicity. Some dyes, such as Red 40, Yellow 5, and Blue 1, are banned or require warning labels in other countries, yet remain widely used in Australia. We've chosen to avoid them. Body Armour formulas use natural colours like curcumin, beta-carotene, spirulina, and carmine, selected not only for their safety, but also for their added functional benefits. Performance and recovery should never come with hidden risks.

Our Standards

We continuously review our formulas, seeking improvements aligned with emerging science. Every ingredient, from minerals to flavourings to colours, is meticulously assessed with one key question in mind: is this the safest, most effective option available? We don't compromise on quality, and we don't include ingredients just because “everyone else does.” Our mission is to support performance and recovery through clean, science-backed formulations.

All information provided is for general informational purposes only and does not substitute professional medical advice. Results may vary based on individual health, lifestyle, and usage. Body Armour products are formulated using scientific research and comply with Australian food and supplement regulations. No claims are intended to diagnose, treat, or cure any condition. HYPOTONIC SACHETS

HYDRATE⁺

Delivering Optimal Recovery & Performance

Body Armour Hydrate+ is a next-generation premium hydration formula, scientifically developed using the latest nutritional research. It delivers a full spectrum of electrolytes, combined with synergistic ingredients in a hypotonic solution to support optimal performance and effective recovery. Proudly formulated and manufactured in Australia, it's designed for safe, effective daily use, promoting rapid hydration with no added sugar.

WHY 'NO ADDED SUGAR'?

Everyday hydration does not require added sugar, so we don't add it. Our sachets do contain a small amount of naturally occurring sugar from Sea Buckthorn however, a nutrient-dense berry included for its health benefits, not for sweetness. These natural sugars are minimal and come alongside a range of antioxidants, vitamins, and essential nutrients that support overall well-being.

5 Electrolytes

Contains the full spectrum of key electrolytes including sodium, potassium, magnesium, calcium and chloride.

9 Vitamins

Includes specialised ingredients such as B-vitamins, Vitamin C, L-Theanine and Glutamine to support cognition, energy, muscle health and recovery.

Ingredients: Body Armour Hydration Blend (Glycine, Glutamine, Calcium Lactate monohydrate, Magnesium Glycinate, Sodium Chloride, Potassium Chloride, Silica Sipernat, Sea Buckthorn, L-Theanine), Natural Raspberry Flavour, Arabic Gum/Rice Maltodextrin, Citric Acid, Natural Colours (Curcumin, Blue Spirulina, Red Beetroot), Panmol B, Thaumatin.

www.who.int

Sodium 2000 mg/day
Potassium 3,800 mg/day
Magnesium 420mg/day
Chloride 2300 mg/day
Calcium 1,000mg/day
Sugar 50g/day

RDIs are based on the nutritional needs of a healthy individual leading a typical, low-to-moderate activity lifestyle. It's important to note that industrial athletes working in extreme conditions may require higher amounts of nutrients, including calories, protein, and electrolytes, to support the increased physical demands and environmental stress they face.

COMPARISON TABLE

POWDER SACHET SINGLE SERVING

Basic hydration relies on both sodium and potassium to power the sodium-potassium pump, which moves sodium out of cells and potassium in. However, optimal hydration and recovery requires all five key electrolytes. These ensure proper fluid distribution, help prevent dehydration, cramps and fatigue, crucial for workers in the heavy industry

Studies have shown that regular consumption of these artificial chemicals may negatively impact hormone regulation, brain function, and overall health. Several artificial additives are classified as carcinogens, potentially increasing the risk of chronic diseases, including cancer. Avoiding these chemical and synthetic substances is highly recommended for safeguarding long-term health.

Modern diets are already surpassing the World Health Organisation's recommended daily sugar intake—no more than 50g, and ideally 25g. Given the high volume of hydration solutions typically consumed by workers in physically demanding roles, it's important to consider the compounding effect of sugar intake.

These nutrients have been shown to support muscle recovery, immune function, and overall well-being by aiding muscle repair, digestive health, and provide antioxidants to fight oxidative stress whilst boosting energy metabolism, reduce fatigue, and enhance recovery after physical exertion. These elements offer a more comprehensive solution that addresses the diverse needs of workers exposed to physically demanding activities under challenging conditions.

HYPOTONIC LIQUID CONCENTRATE

HYDRATE⁺

Delivering Optimal Recovery & Performance

Body Armour Hydrate+ Cordials are a clean, concentrated hydration solution designed for convenience and daily use. Formulated with a hypotonic electrolyte base and naturally sweetened with thaumatin, they deliver rapid hydration with zero added sugar and no artificial sweeteners, colours, or flavours.

Ideal for staff lunch rooms, crib rooms, or hydration stations, the Cordials are made to encourage consistent fluid intake throughout the day. Each bottle can be paired with a heavy-duty pump for easy, mess-free dosing, allowing a measured shot of electrolytes to be added to any glass or water bottle. When positioned next to a tap, it becomes a highly effective hydration hub that promotes better water habits across teams and workplaces.

With six flavours to choose from, this range remains a go-to favourite in all kinds of work environments.

4 Electrolytes

Contains key electrolytes, sodium, potassium, magnesium and chloride in a highly absorbable form.

L-Theanine Nootropic

L-theanine is an amino acid known to promote calm focus, reduce stress, and support cognitive performance without causing drowsiness.

5 vitamins

Ingredients: Water, Glycerine, Natural Flavours, Vitamins (Vitamin C, Vitamin B12, Vitamin B6, Vitamin B5, Vitamin D), L-Theanine, Citrus Pectin, Minerals (Magnesium Citrate, Sodium Chloride, Potassium Chloride), Citric Acid, Natural Sweetener (Thaumatococcus), Natural Colour (Carmine, Beta Carotene, Carmine, Carthamus extract, Spirulina Extract), Potassium Sorbate, Sodium Benzoate.

HYPOTONIC ICY POLES

HYDRATE⁺

Delivering Optimal Recovery & Performance

Body Armour Hydrate+ Icy Poles are a clean, effective hydration option designed to support both fluid balance and temperature regulation in hot or high-intensity environments. Formulated with a full spectrum of electrolytes in a hypotonic base, they offer rapid hydration with no zero sugar or artificial sweeteners.

Consuming ice has been shown to assist with thermoregulation by reducing the rise in core body temperature. This effect is driven by the transfer of heat between the cold product and the gastrointestinal tract, helping the body shed excess heat quickly. Research suggests that ingesting 5g of crushed ice per kg of body weight over a short period can assist in cooling.

4 Electrolytes

Contains key electrolytes, sodium, potassium, magnesium and chloride in a highly absorbable form.

L-Theanine

Nootropic

L-theanine is an amino acid known to promote calm focus, reduce stress, and support cognitive performance without causing drowsiness.

CALM A RESTLESS MIND

SLEEP

Body Armour Sleep is a comprehensive, science-informed formula developed by chemists and naturopaths to support deep, restorative rest.

4 out of 10 of Australian adults have sleep issues. Today's lifestyles are more overstimulated than ever, with stress, racing thoughts, and disrupted cortisol rhythms all impacting the body's natural sleep cycles. For those leading demanding lives, physically, mentally, or both, deep sleep is essential for recovery and sustained performance.

BOOSTS REM AND DEEP SLEEP

ZERO SUGAR CANS

HYDRATE⁺

Nutrient Enhanced Sparkling Beverages

Traditional energy drinks are often packed with sugar, synthetic caffeine, and harsh stimulants, leading to crashes, dehydration, and unwanted side effects like jitters or heart palpitations. They may offer a quick lift, but rarely support sustained performance or clear focus when it counts.

The Body Armour Functional Can Range was built differently. Available in both caffeinated and non-caffeinated options, each option delivers a unique blend of electrolytes, essential vitamins, amino acids, and nootropics to support energy, recovery, and mental clarity, without the crash. Lightly sparkling, naturally sweetened, and made with purpose, it's performance you can feel.
