

# Clean Air™ Home & Commercial Coil Foam Cleaner Application Instructions

## Directions:

Clean Air™ foam is self-rinsing on condensation producing coils. Spray on and the condensation generated will help wash away the contaminants. This treatment will leave the unit cleaned and deodorized. Maintaining and keeping clean coils increases efficiency and saves time and cost. Turn off or disconnect power to the unit being treated. Shake well, and point can toward the surface to be cleaned. Avoid spraying on electrical wires or connections. Thoroughly saturate the targeted area with the product. With this self-rinsing formula, The foam will liquefy, and condensation will thoroughly rinse away the contamination and debris. You may wipe clean or rinse with water if desired. For extraordinarily stubborn or heavy deposits, repeat application may be necessary. Turn on or return power to the unit.
