IMPORTANT SAFETY GUIDELINES

This product is recommended for use by children ages 3-11. This product is intended for residential use only and not intended for use in any public setting. A safety surface such as mulch or recycled tire should be used under the play set to prevent injury from falls. Also a 6 foot safety zone should be used around the entire play set.

As with any home project, good judgment and respect for power tools will greatly reduce the risk of injury. Gorilla recommends you follow all tool manufacturers' safety guidelines. Always wear eye protection and safety gloves to prevent injury. In several phases of construction two people may be required for lifting and securing of lumber. While the play set is being constructed, please keep children off the equipment until the project is complete. Bolts and screw heads should be checked regularly for tightness. The ground ladder, rope ladder, slide, swings and other areas where children spend a majority of their playtime should be checked more frequently.

Gorilla shall not be liable for incidental, indirect or consequential damages or injuries that result from building and/or playing on our play sets. Adult supervision is recommended anytime a play set is being used.

IMPORTANT – PLEASE READ

Congratulations! You have just purchase one of the finest residential wooden swing sets available today. As with any wooden product that spends its entire life outside, in varying elements, it is important to know what to expect with your new swing set so that your family can enjoy it for many years.

As your swing set acclimates to its new environment, natural characteristics of the wood can show in the form of checks, or “cracks” in the lumber. In almost all cases this is normal and it will not affect the structural integrity of your play set and is not covered under warranty.

KEEPING YOUR PLAYSET LIKE NEW

MUST DO's

The following owner responsibilities are crucial to the safety, integrity and aesthetic appeal of your swing set and may affect the warranty if not adhered to.

WITHIN 60 DAYS

- Check and tighten Hex Bolts/T-nuts, Carriage Bolts/Lock-nuts, and Lag Screws within the first 60 days and then twice annually – once before each season and then once during the season.

WITHIN 90 DAYS

- Apply a **sealant** or **semi-transparent stain with sealant** within the first 90 days of owning the swing set. Our own Stain/sealant is available online here: <http://www.gorillaplaysets.com/Playground-Sealant-p/10-0003.htm>

Oil based stain or water based stain may be used. Should you choose to use other stain we suggest asking the product covering specialists at any number of specialty paint stores or home improvement centers for a product that would work best for your local environment. ** TIP – while the set is new, take a small board from to the store with you so they can color match the tint of the stain or sealant.

SEASONAL REMINDERS

- If your area experiences regular snowfall, remove your fabric tarp/canopy to avoid stretching, sagging or tearing of the material. Store it inside, folded up, and it will be as good as new when winter is over.
- If your area experiences extremely cold temperatures, remove swing belts and other pliable features to prolong the lifespan of these play activities.

OTHER TIPS

- Spray swing hangers with Pam, Mazola or olive oil to stop squeaking; do not use petroleum based products such as WD-40 or motor oil.
- To repel yellow jackets and wasps, use a cotton ball and dab interior wooden corners underneath the play set deck with a liquid dish soap. Avoid using insecticides.
- To speed up the slide wipe the center of slide with wax paper every 2 - 3 weeks.

Safety and Maintenance Tips for Your New Play Set:

NOTE: Your children's safety is our #1 concern. Observing the following statements and warnings reduces the likelihood of serious or fatal injury. Please review these safety rules regularly with your children.

- This play set is designed for the use of 4 occupants who have a combined weight not exceeding 800 pounds on the elevated floor, 3 occupants who have a combined weight of 425 pounds on the swing area, for a total Unit capacity of 7 occupants who have a combined weight of 1225. (This weight does not include any picnic table area(s).)
- On-site adult supervision is required.
- Teach children not to walk close to, in front of, behind, or between moving swings or other moving playground equipment.
- Teach children to sit in and never stand on swings
- Teach children not to twist the chains and ropes and not to loop them over the swing beam, since this may reduce the strength of the chain or rope.
- Teach children not to jump from swings or other playground equipment in motion.
- Teach children not to push empty seats. The seat may hit them and cause serious injury.
- Teach children to sit in the center of the swings with their full weight on the seats.
- Teach children not to use the equipment in a manner other than intended.
- Teach children to always go down slides feet first. Never slide headfirst.
- Teach children to look before they slide to make sure no one is at the bottom.
- Teach children to never run up a slide, as this increases their chances of falling.
- The parents should have the children dress appropriately with well-fitting shoes. Loose clothing such as scarves and ponchos should not be worn. Always take off, tie up or tuck in cords and drawstrings on children's clothing. These things can get caught on playground equipment and strangle a child.
- Teach children not to climb when the equipment is wet.
- Teach children to never jump from a fort deck. They should always use the ladder, ramp or slide.
- Teach children to never crawl or walk across the top of monkey bars or swing beam.
- Teach children to never crawl on top of a fort roof or on the outside of a tube slide.
- Verify that any suspended climbing ropes, chains, or cables are secured at both ends and that they cannot be looped around an adult hand.
- Teach children not to attach items to the playground equipment that are not specifically designed for use with the equipment, such as, but not limited to, jump ropes, clothesline, pet leashes, cables and chain as they may cause a strangulation hazard.
- Teach children to never wrap their legs around swing chain.
- Teach children to never slide down the swing chain.
- Teach children to remove their bike or other sports helmet before playing on the playground equipment.
- Teach children to NEVER look at the sun or other bright light through any accessory such as but not limited to a telescope, periscope or binoculars.

WARNING: Children must NOT use this play set until it has been completely assembled and inspected by an adult to insure it has been properly installed and the swing beam legs are anchored.

Safety and Maintenance Tips for Your New Play Set: (continued)

Playgrounds should be inspected on a regular basis. If any of the following conditions are noted, they should be removed, corrected, or repaired immediately to prevent injuries.

- Hardware that is loose, worn or that has protrusions or projections.
- Exposed equipment footings.
- Scattered debris, litter, rocks, or tree roots.
- Splinters, large cracks, and decayed wood components.
- Deterioration and corrosion on structural components, which connect to the ground.
- Missing or damaged equipment components, such as handholds, guardrails, swing seats.
- Check all nuts and bolts twice monthly during the usage season and tighten as required. (But not so tight that you crack the wood) We recommend you check the swing beam and hardware often due to wood expansion and contraction. It is particularly important that this procedure be followed at the beginning of each season.
- Remove plastic swing seats and take indoors or do not use when the temperature drops below 32°F. Reinstall swings and other swing equipment at the beginning of the usage season.
- Oil all metallic moving parts monthly during the usage period.
- Check all coverings for bolts and sharp edges twice monthly during usage season to be certain they are in place. Replace when necessary. It is especially important to do this at the beginning of each new season.
- Check swing seats, ropes, cables and chains monthly during usage season for evidence of deterioration. Replacement should be made of any swing seat that has developed cracks in the plastic seats. Ropes, cables and chains should be removed and replaced if excessive wear is found. Contact us for warranted replacement parts.
- Swing chains, rings, ropes, etcetera should always be fastened to a rotating swing hanger. NEVER attach a chain, ring, rope, etcetera to a stationary hanger such as but not limited to an eye bolt. Severe wear could occur leading to an injury.
- For rusted areas on metallic members such as monkey bars, hand supports brackets, etc.; sand and repaint, using a non lead-based paint meeting the requirements of Title 16 C.F.R. Part 1303. These requirements are available at: <http://www.cpsc.gov/>
- Inspect wood parts monthly. The grain of the wood sometimes will lift in the dry season causing splinters to appear. Light sanding may be necessary to maintain a safe playing environment. If you are treating your play set with stain regularly, it will help prevent severe checking/splitting and other weather damage.
- Once or twice a year, depending on your climate conditions, you must apply some type of protection (sealant) to the wood of your unit. Prior to the application of sealant, lightly sand any “rough” spots on your set. Please note this is a requirement of your warranty.
- Creating and maintaining the play set on a level location is very important. As your children play, your play set will slowly dig its way into the soil, and it is very important that it settles evenly. Make sure the play set is level and true once each year or at the beginning of each play season.
- Twice a month during the usage season rake the playground protective surfacing materials to prevent compaction and maintain appropriate depths. Replace the protective surfacing materials as required.
- Disposal Instructions: When the play set is no longer desired, it should be disassembled and disposed of in such away that no unreasonable hazards will exist at the time the play set is discarded.

Play Set Surfacing Recommendations:

Below are some of the recommendations that the U.S. Consumer Product Safety Commission (CPSC) offers from its Handbook for Public Playground Safety. The guide can be downloaded in full at www.cpsc.gov/cpscpub/pubs/325.pdf

1. Protective Surfacing - Since almost 60% of all injuries are caused by falls to the ground, protective surfacing under and around all playground equipment is the most critical safety factor on playgrounds.

Certain manufactured synthetic surfaces also are acceptable; however, test data on shock absorbing performance should be requested from the manufacturer.

Asphalt and concrete are unacceptable. They do not have any shock absorbing properties. Similarly, grass and turf should not be used. Their ability to absorb shock during a fall can be reduced considerably through wear and environmental conditions.

Certain loose-fill surfacing materials are acceptable. Surfacing materials are acceptable, such as the types and depths shown in the table.

Fall Heights and Materials

Type Of Material	6 in. depth	9 in. depth	12 in. depth
Double-Shredded bark mulch	6' Fall Height	10' Fall Height	11' Fall Height
Wood Chips	6' Fall Height	7' Fall Height	12' Fall Height
Fine Sand	5' Fall Height	5' Fall Height	9' Fall Height
Shredded Tires*	10-12' Fall Height	N/A	N/A
Fine Gravel	6' Fall Height	7' Fall Height	10' Fall Height

*This data is from tests conducted by independent testing laboratories on a 6-inch depth of uncompressed shredded tire samples produced by four manufacturers. The tests reported critical heights, which varied from 10 feet to greater than 12 feet. It is recommended that persons seeking to install shredded tires as a protective surface request test data from the supplier showing the critical height of the material when it was tested in accordance with ASTM F1292.

It should be recognized that all injuries due to falls cannot be prevented no matter what surfacing material is used.

2. Fall Zones - A fall zone, covered with a protective surfacing material, is essential under and around equipment where a child might fall. This area should be free of other equipment and obstacles onto which a child might fall. Stationary climbing equipment and slides should have a fall zone extending a Minimum of 6' in all directions from the perimeter of the equipment.

Swings should have a fall zone extending a minimum of 6' from the outer edge of the support structure on each side. The fall zone in front and back of the swing should extend out a minimum distance of twice the height of the swing as measured from the ground to the top of the swing support structure.

LEVELING YOUR FORT DURING ASSEMBLY

- Complete the steps which will be the basic frame of the fort. {i.e. four corner posts with base (sand box boards) and deck supports}
- Position in the most level area chosen for the play set, keeping in mind the location and size of the swing beam, ladder, slides, etc. that extend off the fort.
- Once the frame is in the final position, check for vertical and horizontal levelness to determine which side(s) will need to be dug into the ground to level the play set.
- With a shovel, score the ground around the outside edges of the sandbox boards on the 'high' side of the fort. This is the area that will be dug in. Make sure to score deep enough; the scored lines will be your digging template.
- Push the frame off and away from the scored area, far enough to dig and remove dirt to reach the appropriate depth.
- Dig a channel along the scored line(s) for the base of the fort (corner post and sandbox boards) to rest into. Dig the channel(s) to the same level depth. The bottom of the channel(s) should be level to each other so your frame doesn't teeter or rock because the channel(s) are uneven.
- Once you have removed enough grass and dirt, slide/push the frame into the channel(s). Place a level on the vertical and horizontal boards of the frame to determine if enough soil, or too much, was removed.
- Repeat this process until the basic frame is plumb and level and in its final position before completing the rest of the assembly.
- Measure to make sure fort is square.

Important: if you require a channel depth of more than 6", then we recommend you have your play set area professionally graded before completing assembly.

Example Play area:

■ = Area to be scored and channeled for levelness

General Info to Review Before Installation

- Depending on your experience, assembly of the playset can take as little as 6 hours up to 24 hours, depending on size, after inventory of parts; therefore, we recommend you set aside a full two days for assembly.
- Identify all of the parts for your play set. Empty each box and lay out boards so you can see each part. Your instruction book will have detailed drawings that will make it easy for you to recognize individual parts. Keep all hardware and metal parts separate from wooden pieces.
- After everything is laid out, check carefully to ensure all parts are present. Make sure there are no broken boards.
- Find an area to sort your hardware. It is best to open the hardware on a solid surface so that you do not lose any pieces in the grass. This will save time and familiarize you with all the different pieces in the hardware bag.
- Important note: Wood has some natural defects such as knots, surface cracks, etc... We reject parts that are structurally defective. We use a high quality lumber in our structures; however, you should inspect each part for splinters or rough spots and sand them smooth to prevent injury.
- After familiarizing yourself with all of the components, read all instructions thoroughly. Reading instructions after you have studied the parts will help you understand the installation process, and help to eliminate unnecessary mistakes.
- Pay close attention to the diameter and length of each bolt and screw.
- Never tighten hardware completely at first. It helps to have some adjustment for bolt alignment while you are attaching parts together. After everything is square, tighten each joint.
- After the main unit is assembled it is critical that the floor is level and square. If the main frame is not level, the walls and floor will be out of square.
- After you complete installation, make sure every bolt, screw, and nut is tight, and every board is secure. Wood will expand and contract with the seasons.
- Place the set on level ground, not less than 6 feet from any structure or obstruction such as a fence, garage, house, overhanging branches, laundry lines, or electrical wires.

This page is a list of definitions and explanations used throughout our instructions to aid you in the assembly of your play set.

Offset Holes- Throughout the installation procedures we will refer to parts with offset holes. This refers to the orientation of the holes on the board. An offset hole is one that is closer to one side than it is the other or in other words, it is not centered on the board. In the procedures you will be instructed to attach the boards with the holes offset up or with the holes offset down. This refers to which side of the board the hole/holes should be closer to. Offset holes up= hole/holes will be closer to the top of the board. Offset holes down= hole/holes will be closer to the bottom of the board. Note: some parts do not have offset holes, but instead the holes are on center. Therefore there will not be any reference on how to offset these parts.

EXAMPLE OF OFFSET HOLES UP

EXAMPLE OF OFFSET HOLES DOWN

Counter-sunk holes - Many of the parts that will be used have counter-sunk holes. A counter-sunk hole is one that surrounds one side of a through hole, but does not extend through the wood it's self. When using a counter-sunk hole the bolt will be inserted through the through hole and either the head of the bolt and washer or nut and washer will occupy the counter sunk hole.

Lag Screws- Lag screws are used in the construction of our play sets to enhance the structural integrity of the unit. There will not be predrilled holes in the post for lag screw installation. Lag screws are self-tapping, though if you are using a manual socket wrench it may be advantageous to pre-drill a hole first. Instructions for this are provided on a separate page in the front of the manual. Be sure to tighten the lags completely when driving them in by hand. Power tools such as a heavy duty impact driver or large power drill should have enough torque to drive in the lag screws, but make sure not to over tighten as this can cause the threads to “strip out” in the post.

Common Installation Practice Installing T-nuts

When installing T-nuts into the wood, use a smooth faced hammer to set the face of the T-nut flush into the wood.

Insert the barrel of the T-nut into the predrilled hole. Using a smooth faced hammer, drive the T-nut until the face of the T-nut is flush to the wood.

This picture shows the T-nut inserted and installed flush to the wood.

This picture shows an end view of the T-nut installed flush to the wood.

WARNING: DO NOT EMBED THE TOP OF THE T-NUT INTO THE FACE OF THE WOOD

Cross Section end view, you are looking at an X-ray view of the post and T-nut. The barrel of the T-nut is in the corner post the line is the face of the wood.

HOW A T-NUT WORKS

THE FIRST STEP IN OUR ASSEMBLY INSTRUCTIONS IS TO INSERT T-NUTS INTO THE CORNER POSTS. A T-NUT IS A FASTENER WHICH IS THREADED ON THE INSIDE AND IT FUNCTIONS JUST LIKE A STANDARD HEX NUT. YOU INSERT THE T-NUTS INTO THE PREDRILLED HOLES IN THE CORNER POSTS.

THE T-NUT HAS A BARREL SHAPED END WHICH GOES INTO THE HOLE IN THE CORNER POST. THE T-NUT ALSO HAS AN FLANGE SHAPED END WITH TEETH. THE TEETH PENETRATE INTO THE CORNER POST WOOD TO PREVENT THE T-NUT FROM SPINNING WHEN YOU TIGHTEN THE HEX HEAD BOLT.

SHOWN BELOW YOU WILL SEE THE T-NUT IS HAMMERED INTO THE CORNER POST ON THE BACK SIDE. THE BOARD IS BEING ATTACHED ON THE FRONT SIDE OF THE CORNER POST.

BOARD IDENTIFICATION

1. On the end of each board there should be a small white tag that is stapled or stuck into place. Remove the staples and/or tag after the board is installed.
2. This white identification tag displays the thickness, width, length and an abbreviated description of the part.

Example: a tag reads "2-4-3600-BPB"

- The 2 is the thickness of the board. "Nominal Lumber" at a home center will measure 1-1/2" for the thickness. We "remill" that lumber to 1-3/8" thick.
- The 4 is the width of the board. "Nominal Lumber" at a home center will measure 3-1/2" for the width. We "remill" that lumber to 3-3/8" wide.
Note: sometimes the width will be smaller than 3-3/8" because:
A) We need the width of the part to fit into a certain area of the play set.
B) We need the designation to be simple.
- The 3600 is the length of the board. It means the board is 36 inches long. If the code were 3625 then the board is 36-1/4" in length.
- The "BPB" abbreviation stands for "Bottom Panel Board". The wood part bill of materials in the instructions has a description which will match the abbreviation closely.
- In the event that there is no tag on a wood part measure the part then:
A) Use the measurements and compare them to the wood list at the front of the instructions to identify it.
B) Look at the holes on the wood part and compare them to the pictures in the wood list.
C) Look to see if the holes are centered or if they are offset up or offset down.
This should help you identify any parts that have missing tags. In the event that you cannot identify a board please email us for assistance.

PRE-DRILL LAG SCREW DIRECTIONS

Pre-drilling holes for lag screws will make it easier to drive the screws in by hand. "Jobber" length drill bits are available in sizes that are longer than standard drill bits and those are ideal for the job. When using the drill bit you will have to "spot" drill the post and then remove the board you are attaching to finish drilling the hole.

Pay attention to the *DIAMETER* of the lag screw you are installing. Your playset may come with two different diameter lag screws. Each diameter will require a different size drill bit. When installing lag screws **DO NOT OVERTIGHTEN.**

LAG SCREW DIAMETER	DRILL BIT SIZE
5/16" DIAMETER	9/64"

STEP 1: ATTACHING T-NUTS TO THE CORNER POSTS

1: THIS STEP IS CRITICAL TO BUILDING THE FORT PROPERLY. IF ANY MISTAKES ARE MADE HERE, YOU WILL NEED TODIS-ASSEMBLE AND THEN RE-ASSEMBLE TO MAKE YOUR CORRECTIONS.

2: MAKE SURE HOLES ARE FREE OF ANY OBSTRUCTIONS. USE A BOLT TO CLEAN OUT ANY DEBRIS.

3: LAY OUT EACH OF THE 4 X 4 X 96" CORNER POSTS IN THE AREA YOU INTEND ON BUILDING THE FORT SIDE OF THE PLAYSET.

4: USE THE DIAGRAM BELOW TO CORRECTLY IDENTIFY AND ORIENT THE NECESSARY DIRECTION THE POSTS SHOULD FACE.

5: USE A HAMMER TO SEAT THE T-NUTS AFTER INSERTING THEM INTO THE HOLES SHOWN IN THE DIAGRAM BELOW.

6: THE BARREL OF THE T-NUT SHOULD GO IN THE HOLE FIRST. HAMMER THE T-NUT UNTIL IT IS FLUSH/ALMOST FLUSH TO THE CORNER POSTS.

7: PLACE A PLASTIC PLUG INTO ALL THE CORNER POST TOP HOLES. USE A DAB OF SILICONE ON THE PLUGS TO SEAL THE HOLES.

STEP 2: ASSEMBLING THE RIGHT SIDE FRAME

- 1: LAY THE RIGHT SIDE CORNER POSTS ON THE GROUND IN THEIR PROPER ORIENTATION.
- 2: LAY THE 2 X 6 X 78" SIDE SANDBOX BOARD- RIGHT ON TOP OF THE RIGHT SIDE CORNER POSTS AT THE BOTTOM OF THE CORNER POSTS. THE HOLES IN THE SIDE SANDBOX BOARD - RIGHT MUST BE OFFSET DOWN.
- 3: USE 5/16 X 4-1/2" HEX BOLTS AND 5/16" WASHERS TO ATTACH THE TOP HOLES OF THE SANDBOX BOARD TO THE T-NUTS INSTALLED ON THE CORNER POSTS. THE BOTTOM HOLES WILL BE USED LATER.
- 4: LAY THE 2 X 6 X 47-1/2" BOTTOM PANEL BOARD ON TOP OF THE RIGHT SIDE CORNER POSTS IN THE MIDDLE OF THE CORNER POSTS. THE HOLES IN THE BOTTOM PANEL BOARD MUST BE OFFSET DOWN.
- 5: USE 5/16 X 4-1/2" HEX BOLTS AND 5/16" WASHERS TO ATTACH THE BOTTOM HOLES OF THE BOTTOM PANEL BOARD TO THE T-NUTS INSTALLED ON THE CORNER POSTS. THE TOP HOLES WILL BE USED LATER.
- 6: LAY THE 4 X 4 X 47-1/2" SWING BEAM MOUNT ON TOP OF THE RIGHT SIDE CORNER POSTS. THE THREE COUNTERSUNK HOLES IN THE MIDDLE OF THE SWING BEAM MOUNT MUST FACE DOWNWARD.

STEP 15: BRIDGE RAIL SLATS

1. PRE-DRILL TWENTY $5/4 \times 3 \times 16$ " BRIDGE RAIL SLATS ON EACH END WITH A $1/8$ " DRILL BIT. (SEE TOP IMAGE BELOW)
2. PLACE THE BRIDGE RAIL SLATS 3" FROM THE FACE OF THE CORNER POSTS, AND ATTACH WITH 2" WOOD SCREWS. THE SLATS WILL MOUNT ON THE OUTSIDE OF THE BRIDGE RAILS.
3. ATTACH THE REMAINING SLATS TO THE UNIT WITH 3" SPACING BETWEEN THE SLATS.

STEP 16: BRIDGE DECK AND CHAIN ASSEMBLY

1: FIND FIFTEEN 2 X 4 X 29" BRIDGE DECK BOARDS AND INSERT T-NUTS INTO THE PRE-DRILLED HOLES. USE A HAMMER TO SEAT THE T-NUTS INTO THE BOARDS.

2: FLIP ALL 15 BRIDGE DECK BOARDS OVER SO THAT THE FLANGE OF THE T-NUT IS FACING DOWN. LAY THE BRIDGE DECK BOARDS OUT ON A FLAT SURFACE AS SHOWN BELOW.

STEP 17: BRIDGE DECK AND CHAIN ASSEMBLY

- 1: LOCATE TWO 96" CHAIN SECTIONS THAT SHIPPED WITH THE CLATTER BRIDGE.
- 2: PLACE THE CHAINS OVER THE HOLES IN THE BRIDGE DECK BOARDS AS SHOWN BELOW.
- 3: LINE UP THE 18TH LINK IN THE CHAINS WITH THE FIRST BRIDGE DECK BOARD HOLES.

STEP 18: BRIDGE DECK AND CHAIN ASSEMBLY

1: PLACE A 5/16" WASHER BETWEEN THE 18TH CHAIN LINK AND THE BRIDGE DECK BOARD.

2: PLACE A 5/16" X 1-3/4" HEX BOLT WITH 5/16" WASHER THROUGH THE 18TH CHAIN LINK, THEN THROUGH THE 5/16" WASHER, THEN THROUGH THE HOLE IN THE BRIDGE DECK BOARD AND SCREW IT INTO THE T-NUT. TIGHTEN THE BOLT BUT NOT SO TIGHT THAT YOU CRACK THE WOOD.

3: COUNT OVER 4 CHAIN LINKS FROM THE LAST HEX BOLT. AT THIS CHAIN LINK PLACE A 5/16" WASHER BETWEEN THE CHAIN LINK AND THE BRIDGE DECK BOARD. NOTE THAT THREE EMPTY CHAIN LINKS ARE BETWEEN THE BOLTS.

4: PLACE A 5/16" X 1-3/4" HEX BOLT WITH 5/16" WASHER THROUGH THE CHAIN LINK, THEN THROUGH THE 5/16" WASHER, THEN THROUGH THE HOLE IN THE BRIDGE DECK BOARD AND SCREW IT INTO THE T-NUT. TIGHTEN THE BOLT BUT NOT SO TIGHT THAT YOU CRACK THE WOOD.

5: REPEAT SUBSTEPS 3 & 4 UNTIL YOU HAVE SECURED THE CHAIN TO THE BRIDGE DECK BOARDS ALONG ONE SIDE. THEN START OVER WITH THE OTHER CHAIN AND REPEAT THIS ENTIRE PROCESS.

STEP 19: BRIDGE DECK/CHAIN INSTALLATION

1: LAY THE BRIDGE DECK/CHAINS ASSEMBLY BETWEEN THE PLAY SET AND THE TOWER WITH THE CHAINS FACING THE GROUND. THREAD THE CHAIN ENDS IN THE BRIDGE DECK ASSEMBLY THROUGH THE HOLES IN THE BOTTOM PANEL BOARD AND DECK SUPPORT BOARD ON THE TOWER.

2: THERE SHOULD BE AT LEAST A 1" TO 1-3/4" GAP BETWEEN THE BRIDGE DECK BOARD AND THE BOTTOM PANEL BOARD ON THE TOWER. THIS MEANS THAT YOU WILL HAVE TO CONNECT THE ENDS OF THE CHAINS IN A MANNER TO ACHIEVE THE CORRECT GAP. GO UNDERNEATH THE TOWER DECK AND USE A QUICK LINK TO ATTACH THE CHAINS TOGETHER. IF YOU HAVE LOOSE ENDS OF THE CHAINS HANGING DOWN THREAD THEM THROUGH THE QUICK LINK TO KEEP THEM UP AND OUT OF THE WAY.

1" TO 1-3/4"

CHAIN MUST GO THROUGH TWO BOARDS NO EXCEPTIONS!!

NOTE: TO ACHIEVE THE CORRECT GAP YOU MAY NOT BE CONNECTING THE END LINK OF EACH CHAIN. FOR EXAMPLE YOU MAY HAVE TO CONNECT THE SECOND, THIRD OR FORTH LINKS TOGETHER.

STEP 20: BRIDGE DECK/CHAIN INSTALLATION

1: TWO PEOPLE MAY BE REQUIRED FOR THIS STEP.

2: THERE SHOULD BE AT LEAST A 1" TO 1-3/4" GAP BETWEEN THE BRIDGE DECK BOARD AND THE FRONT FACE BOARD ON THE PLAY SET. THIS MEANS THAT YOU WILL HAVE TO CONNECT THE ENDS OF THE CHAINS IN A MANNER TO ACHIEVE THE CORRECT GAP. IN ORDER TO ACHIEVE THE GAP YOUR ASSISTANT MAY HAVE TO LIFT UP THE BRIDGE DECK ASSEMBLY WHILE YOU CONNECT THE CHAINS TOGETHER WITH THE QUICK LINK UNDER THE PLAY SET DECK. IF YOU HAVE LOOSE ENDS OF THE CHAINS HANGING DOWN THREAD THEM THROUGH THE QUICK LINK TO KEEP THEM UP AND OUT OF THE WAY.

3: THREAD THE CHAIN ENDS IN THE BRIDGE DECK ASSEMBLY THROUGH THE HOLES IN THE FRONT FACE BOARD AT THE FRONT OF THE PLAY SET. THEN THREAD EACH CHAIN THROUGH THE HOLES IN THE DECK SUPPORT. CONNECT THE LEFT CHAIN TO THE RIGHT CHAIN WITH A QUICK LINK.

CHAIN MUST GO THROUGH TWO BOARDS NO EXCEPTIONS!!

STEP 21: VERTICAL TARP SUPPORTS

1: PLACE THE 2 X 4 X 33" VERTICAL TARP SUPPORTS ON THE INSIDE OF THE TOP PANEL BOARDS. THE END OF EACH VERTICAL TARP SUPPORT SHOULD BE FLUSH TO THE BOTTOM OF THE TOP PANEL BOARD. CENTER EACH VERTICAL TARP SUPPORT WITH THE CENTER OF THE TOP PANEL BOARD. SQUARE EACH VERTICAL TARP SUPPORT TO THE TOP PANEL BOARD.

2: ATTACH THE VERTICAL TARP SUPPORTS TO THE TOP PANEL BOARDS WITH 2-1/2" WOOD SCREWS.

STEP 22: TARP BOARDS

1: LOCATE THREE 2 X 4 X 36-3/4" TARP BOARDS.

2: PLACE ONE TARP BOARD ON TOP OF THE VERTICAL TARP SUPPORTS. THE END OF THE TARP BOARD SHOULD BE FLUSH WITH THE SIDES OF THE VERTICAL TARPS SUPPORTS.

4: PLACE ONE TARP BOARD ON TOP OF THE CORNER POSTS. THE TARP BOARD SHOULD BE FLUSH TO THE OUTSIDE OF THE CORNER POST.

5: ATTACH THE TARP BOARD TO THE TOP OF THE CORNER POSTS WITH 2-1/2" WOOD SCREWS.

6: REPEAT SUBSTEPS 4 AND 5 TO INSTALL THE LAST TARP BOARD.

STEP 23: CLATTER BRIDGE TARP

1: LOCATE THE 34-1/4" X 57-1/2" CLATTER BRIDGE TARP.

2: PLACE THE TARP OVER THE TOP OF THE TARP BOARD ON TOP OF THE VERTICAL TARP SUPPORTS.

3: THE TARP WILL OVERLAP THE SIDE OF THE TARP BOARDS ON TOP OF THE CORNER POSTS.

4: ATTACH THE TARP THROUGH THE GROMMETS TO THE TARP BOARDS WITH #14 X 1-1/4" PAN HEAD SCREWS AND 1/4" FLAT WASHERS.

STEP 24: ATTACHING WAVE SLIDE

1: PLACE THE SLIDE IN THE OPENING OF THE CLATTER BRIDGE TOWER AS SHOWN WITH THE LIP OF THE SLIDE RESTING ON TOP OF THE DECK BOARDS.

2: PREDRILL 1/8" HOLES INTO THE DECK BOARDS AT THE SCREW LOCATIONS.

3: ATTACH THE SLIDE TO THE DECK BOARDS WITH FOUR #14 X 1-1/4" PAN HEAD SCREWS

Leftover Parts List 1500KT Play Set

Our 1500 series play sets are modular and include parts to construct many different models. Some of these parts included with your play set will not be used because they are for a different model. The list below includes parts for your play set that will be leftover when construction is completed.

2 pieces 125-3-2825-PS Panel Slats (We include these parts in case the customer wishes to fill in the area where the Tic Tac Toe is located. Should the Tic Tac Toe become damaged the customer could use these boards to fill in the gap until a replacement Tic Tac Toe is ordered.)

APPENDIX

(06-2004) Clatter Bridge Mesh Panels

Tools Required:

#2 Phillips Bit or screwdriver
1/8" drill bit
Pencil
Drill

Kit Contents:

2 - Green Mesh Panels 66" x 24"
44 - Phillips Pan Head Screws
5.5mm x 25.4mm long
44 - Washers 16mm O.D. X 7.1mm I.D.

Note: Your mesh panels will be completely green. The pictures below show white border and black mesh panels but they are solely for the purposes of demonstrating how the mesh should be installed.

- 1) Center the mesh on the inside of the lower clatter bridge rail. The top of the mesh border should be flush to the top of the clatter bridge rail. If you wish you may mark through the center of the grommets and then drill a 1/8" pilot hole by 1" deep before installing the pan head screws.
- 2) The "recessed area" in the grommet will receive the washer. Place a pan head screw through a washer. Place the screw centered through the grommet and drive it in. The washer should seat centered with the grommet. Repeat this process for all the grommets across the top of the mesh.
- 3) Go to each end of the mesh. Push the end of the mesh tight to the corner post or clatter bridge post. Then install screws and washers into the two grommets on each end of the mesh.
- 4) Repeat substeps 1 through 3 for the mesh panel on the lower bridge rail on the opposite side.

TWO
GROMMETS
AT END OF
MESH.

— CENTER THE MESH PANEL ON THE CLATTER BRIDGE RAIL ON THE INSIDE.
NOTE THE GROMMETS HAVE A RECESSED PART ON ONE SIDE AND IT SHOULD FACE YOU.

— YOU MAY PRE-DRILL 1/8" X 1" DEEP HOLES AT EACH GROMMET LOCATION ALONG THE TOP
PRIOR TO INSTALLING THE PAN HEAD SCREWS AND WASHERS PROVIDED.

****IMPORTANT** - Teach your children not to climb onto or hang from the mesh panels.
If the mesh ever becomes ripped please replace the damaged panel(s).**

****FOR AGES 3-11**
FOR RESIDENTIAL USE ONLY**

5) It will be very helpful to have an assistant at this stage. We recommend predrilling holes for the screws on the bottom of the deckboards fastened to the chains. Align the edge of the mesh border with the end of the bridge deck boards. Mark through the center grommet onto the deck board. Drill a 1/8" hole by 1" deep. Have your assistant push down on the board while you install a pan head screw and washer into the hole. Go from the center grommet to one end of the mesh and repeat the mark/drill/install fasteners procedure. Then go from the center grommet to the other side and do the same.

MARK THROUGH THE CENTER OF THE CENTER GROMMET ONTO THE MIDDLE DECK BOARD. DRILL A 1/8" X 1" DEEP HOLE AT THE MARK. PLACE A PAN HEAD SCREW THROUGH A WASHER AND INSTALL INTO THE HOLE. TRY TO CENTER THE WASHER ONTO THE GROMMET BEFORE TIGHTENING COMPLETELY.

ALIGN EDGE OF BORDER UNDER THE DECK WITH THE END OF THE 2 X 4 BRIDGE DECK BOARDS THAT ARE FASTENED TO THE CHAINS.

GROUND STAKES

1: HAMMER A GROUND STAKE INTO THE EARTH NEXT TO EACH SWING LEG AT AN ANGLE. DO NOT HOLD THE UPPER PORTION OF THE STAKE AFTER THE FIRST COUPLE OF HITS OR IT MAY VIBRATE HARSHLY AGAINST YOUR HAND. IF THE TOP PART OF THE STAKE TWISTS WHEN IT ENCOUNTERS A ROCK OR ROOT YOU MAY HAVE TO BEND THE TOP PORTION OF THE STAKE AGAINST THE SWING LEG. FINALLY INSTALL THE SCREW AND WASHER.

2: ATTACH EACH GROUND STAKE TO THE SWING LEG WITH A #14 X 2" PAN HEAD SCREW AND A 1/4" FENDER WASHER PROVIDED WITH THE GROUND STAKE.
