

Size Guide: Bracelets

Step One

To find out which size fits you best, you can print out this page. Then place your credit card in the space provided to check that the printout, and therefore our scale, is the right size.

Step Two

Now you can cut out our tape measure and make a small incision in the dashed line – this is where the tape measure will be pulled through in the next step.

Step Three

And you're done: You can put the tape measure on your wrist and guide it through the cut. Now all you have to do is read off which size fits you best and nothing will stand between you and your new favorite piece.

If your size cannot be measured exactly, we recommend you to choose the larger size.
