BDKMV

BICH DONT KILL MY VIBE

What is BDKMV

BDKMV is a groundbreaking crypto token designed to redefine the landscape of decentralized finance (DeFi) through its investor-centric approach and robust Autostaking Protocol. This innovative token aims to provide investors with a seamless experience, facilitating high, profitable, secure, and stable returns on their investments.

BDKMV

BDKMV is a decentralized finance (DeFi) ecosystem designed to empower the community and place control back in the hands of investors. Our community-centric ecosystem represents a revolutionary shift in the current DeFi landscape. The BDKMV token offers an enticing investment opportunity through automated staking and compounding of tokens, featuring a Fixed Annual Percentage Yield (APY) of 79,461.795% and a daily Return On Investment (ROI) of approximately 1.02%.

As previously mentioned, BDKMV operates as a community-based token, aiming to disrupt the prevailing developer-centric DeFi ecosystem. This shift aims to dismantle the current structure where developers have become the new intermediaries, akin to bankers, and redistribute the power to investors. This enables investors to truly maximize gains without unnecessary fees imposed by developers. Here are some notable benefits of the BDKMV token:

User-Friendly Autostaking: BDKMV ensures a seamless experience with autostaking directly in your wallet upon token purchase, eliminating the need for transfers to pools or contracts. Immediate staking allows for daily returns of at least 1.02%.

Fixed APY Stability: BDKMV maintains a fixed interest rate of 1.02% daily or 79,461.795% annually with compounding, providing a secure and predictable investment option compared to the volatility of other DeFi protocols.

Swift Rebase Rewards: The BDKMV Auto-staking Protocol distributes rewards every 30 minutes, 48 times daily, establishing it as the fastest auto-staking protocol in the crypto space.

Sustained Value Growth: Utilizing a positive rebase formula, BDKMV ensures that token value remains undiluted, promising a continual increase in the value of BDKMV tokens over the long run, providing confidence against price downturn concerns.

Decentralized Fee Structure: BDKMV operates without centralized exchanges, ensuring that all fees charged are directed back into the ecosystem, benefiting the community.

Supply and Demand Dynamics: BDKMV relies on a supply and demand mechanism to support its price and returns, with the token's price determined solely by the buying and selling of BDKMV tokens. Our development team has meticulously orchestrated these elements for efficient and effective service.

The Liquidity Pool

The BDKMV Liquidity pool is internally managed by the BDKMV contract, effectively serving as both a token and a vault. The BDKMV contract establishes a one-to-one peg for the BDKMV/BUSD pair, exclusively handled within the contract. The price of BDKMV is determined by the quantity of BUSD held by BDKMV and the total value of BDKMV in circulation. Each BDKMV token minted corresponds to an underlying BUSD value, akin to traditional currencies being backed by tangible assets, attributing value to BDKMV.

Furthermore, a portion of the Buy and Sell fees is deducted as a liquidity pool tax, enhancing the BUSD holdings within the contract and consequently increasing the value of the underlying asset. This strategic mechanism contributes to a perpetual increase in the value of the BDKMV token. The choice of BUSD is deliberate for its stability; by avoiding fluctuating prices, BDKMV ensures a stable long-term investment for you.

Buying and Selling

The process of buying and selling is facilitated through the BDKMV swap. Users have the capability to purchase and sell their tokens using BUSD. A buy fee of 15% is applied during the acquisition of BDKMV, while a sell fee of 20% is imposed when BDKMV is sold. These fees play a crucial role in funding various wallets essential for sustaining the ecosystem. The specific wallets to which these fees are transferred are elaborated in greater detail below.

Buying

When you buy BDKMV with BUSD, a 15% fee is applied and distributed to various wallets according to their respective percentages. The remaining 85% is transferred to the liquidity pool, simultaneously minting an equivalent amount of BDKMV tokens to your wallet based on the prevailing BDKMV spot price. Subsequently, you can track the growth of your wallet as BDKMV tokens increase, with rewards issued every 30 minutes.

Selling

When you sell BDKMV for BUSD, a 20% fee is applied to your sales. The fees are directed to their respective wallets, and the remaining 80% of the BDKMV value is converted to BUSD using the spot price. The BDKMV tokens you sold are then burnt, and the BUSD value equivalent to those tokens is transferred to your account. This process ensures that any gains you've accumulated by patiently waiting for the price to increase will be reflected in your overall purchase.

BDKMV Buy and Sell Fees Overview:

Buy and sell fees within the BDKMV ecosystem play a crucial role in sustaining and enhancing its functionality. These fees, set at 15% for buys and 20% for sells, contribute to the impressive stable yield of 79,461.795% annually for BDKMV holders. An additional advantage is that BDKMV uniquely benefits from whale transactions, as fees from dumps are redistributed to all holders as rewards.

Utility of BDKMV Trading Fees:

1. Buy Trading Fees (15%):

- 5% - RFV (Risk-Free Value): Supporting the stability and risk-free value of BDKMV.
- 5% - Liquidity Pool: Enhancing liquidity for the BUSD/BDKMV pair.
- 3% - Treasury: Directly contributing to the treasury for various purposes.
- 2% - Dev and Marketing: Funding development and marketing initiatives.

2. Sell Trading Fees (20%):

- 5% - RFV (Risk-Free Value): Supporting the rebase rewards value.
- 5% - Holders Reward: Rewarding and sustaining holders who retain their tokens.
- 5% - Liquidity Pool: Ensuring continuous liquidity for the BUSD/BDKMV pair.
- 3% - Treasury: Contributing to the treasury for strategic purposes.
- 2% - Dev and Marketing: Allocating funds for development and marketing initiatives.

Placement:

- Direct Holders Reward (5%): Rewards holders who maintain their tokens.
- Liquidity Pool (5%): Backs the liquidity of the BUSD/BDKMV pair, ensuring a rising collateral value of BDKMV.
- Treasury (3%): Supports RFV value, provides a marketing budget, and funds new projects and developments.
- RFV (5%): Supports the rebase rewards value.
- Dev and Marketing (2%): Allocates funds for development, marketing, and new project initiatives.

These strategic allocations ensure a comprehensive and sustainable ecosystem for BDKMV, benefitting both token holders and the continued development of the platform.

The AutoStake Feature

Introduction:

The BDKMV AutoStake feature is a user-friendly and innovative function, encapsulated in the mantra of Buy-Hold-Earn. This functionality ensures unparalleled ease of use for BDKMV holders. The process is simple: Buy BDKMV, hold it in your wallet, and effortlessly earn rebase rewards directly credited to your wallet. As you continue to hold, your BDKMV tokens will experience consistent growth every 30 minutes.

Positive Rebase Formula:

BDKMV employs a Positive Rebase formula, making daily token distribution directly proportional to the daily rebase rewards.

This amounts to 1.02% of the total tokens held in your BDKMV wallet. The rebase rewards are systematically distributed every 30 minutes to all BDKMV holders. This unique approach means that BDKMV holders enjoy an annual compound interest of 79,461.795% without the need to move their tokens from their wallet.

The AutoStake feature stands as a testament to the commitment of BDKMV to provide a seamless and rewarding experience for its holders, emphasizing simplicity and continuous growth in token value.

Rebase Rewards

A Rebase Token, such as BDKMV, experiences fluctuations in its circulating supply as a response to changes in the token price. This expansion or contraction of supply is orchestrated through a mechanism known as rebasing. During a rebase event, the token's supply undergoes algorithmic adjustments, either increasing or decreasing, contingent on the prevailing price of each token.

BDKMV utilizes a positive rebase formula, a distinctive approach that consistently amplifies the token supply. This allows BDKMV holders to witness ongoing growth in their token holdings, akin to a traditional staking protocol. Notably, the BDKMV rebase mechanism eradicates the need for users to go through the approval and staking process traditionally associated with staking protocols.

The positive rebase phenomenon in BDKMV is fortified by two key elements - the Holders Reward and RFV (Risk-Free Value). These components are safeguarded and sustained by the token's buy and sell fees, which play a vital role in supporting the stability and continuous growth of the BDKMV ecosystem.

Wallets

The Holders Reward

Within the BDKMV ecosystem, the Holders Reward wallet stands as a distinct entity. This wallet serves as the hub for automatically rewarding holders for retaining their BDKMV tokens. This strategic approach is designed to incentivize users to keep their tokens and contribute to the continual growth of the BDKMV ecosystem as it appreciates in value.

The Holders Reward wallet maintains its reserve in BUSD, ensuring a stable foundation for facilitating token rewards. This mechanism aligns with the overarching goal of encouraging token retention among users, fostering a supportive community that actively participates in the sustained success of the BDKMV ecosystem.

What is an RFV?

The RFV, or Risk-Free Value, is a dedicated wallet within the BDKMV ecosystem, playing a pivotal role in the BDKMV AutoStaking Protocol.

The BDKMV Risk-Free Value wallet serves a critical function during times of market volatility, particularly in the face of a significant sell-off that could potentially deplete a liquidity pool. Maintaining liquidity is essential for the seamless buying and selling of the token. The RFV wallet acts as a safeguard by providing a reserve of liquidity, preventing any disruptions to the token's liquidity pool during abrupt sell-offs and market fluctuations.

This wallet holds its reserve in BUSD, reinforcing its stability and ensuring it can effectively serve its purpose of preserving liquidity and sustaining the overall integrity of the BDKMV ecosystem.

What is the Treasury?

The Treasury within the BDKMV ecosystem assumes a crucial and multifaceted role, offering three fundamental functions that contribute significantly to the growth and sustainability of BDKMV.

1. **Financial Support:** The Treasury serves as an additional source of financial support for both the Holders Reward and RFV (Risk-Free Value). This support becomes particularly vital during instances of extreme trading drops in the BDKMV token, ensuring stability and resilience within the ecosystem.

2. **Funding New Initiatives:** Another critical function of the Treasury is to allocate funds for the development of new BDKMV products, services, and projects. These initiatives are geared towards expanding and enriching the use cases of BDKMV, ultimately contributing to the broader BDKMV economy.

3. **Economic Expansion:** By funding new products, services, and projects, the Treasury actively participates in building and expanding the BDKMV ecosystem. This strategic approach enhances the overall utility and value proposition of BDKMV, fostering sustained growth and increased adoption.

The Treasury wallet secures its reserve in BUSD, providing a stable financial foundation to execute its pivotal functions for the benefit of the BDKMV ecosystem and its community.

What is APY?

APY, or Annual Percentage Yield, serves as a critical metric that gauges the actual rate of return on your principal tokens, accounting for the impact of compounding interest. In the context of BDKMV, your BDKMV tokens act as your principal, and the compounding interest is periodically added during each Rebase event, occurring every 30 minutes. Your updated principal amount is calculated as the sum of your current BDKMV token amount and the new rebase token amount, forming the basis for the subsequent calculation of your next rebase rewards. The power of compound interest ensures that your balance grows exponentially over time, assuming a daily compound interest rate of 1.02%.

How is the APY Backed?

BDKMV integrates a robust rewards structure that leverages trading volume fees to support staking rewards (rebase rewards), utilizing the BUSD/BDKMV pair supply as a foundational element.

How is the APY Calculated?

The APY is computed using the following equation, raised to the power of 17,520.00 to account for the 48 daily rebase events and considering a frequency of 365 days in a year. This results in a rebase frequency of 17,520.00, indicating that rebase occurs 17,520 times annually.

$APY = (1 + \text{daily compound interest rate})^{\text{rebase frequency}}$

This comprehensive approach to APY calculation showcases the exponential growth potential fueled by the frequent and compounding rebase events in the BDKMV ecosystem.

BDKMV Token

BDKMV Smart Contract

BDKMV introduces a token, the BDKMV token, operating as an ERC-20 token on the Binance Smart Chain (BSC). The launch of this token coincides with the implementation of the new BDKMV contracts.

The BDKMV V1 token extends the same Buy-Hold-Earn benefits, embodying the following features:

- **Autostaking upon Purchase:** The token implements autostaking functionality immediately upon purchase. As long as you hold the token, it will consistently provide rebases, eliminating the need for additional staking.
- **Seamless Rebases:** There's no necessity to connect to the BDKMV website to receive rebases. The process is streamlined, offering a user-friendly experience for token holders. The autostaking mechanism ensures that rebases are automatically distributed without the need for manual intervention.

How To Trade

Trading on BDKMV is designed to be straightforward and user-friendly, minimizing complexity and simplifying the trading experience for users. Here's a step-by-step guide to get you started:

Getting Set Up to Trade

1. **Wallet Requirements:** Before trading, ensure you have a BNB Smart Chain-compatible wallet.
2. **Token Holdings:** Have some BUSD (BEP-20) or BDKMV tokens available in your wallet for trading.

Trading on the BDKMV Exchange

1. Visit the Exchange Page: Go to the designated exchange page on the BDKMV platform.
2. Connect Wallet: Click on "Connect Wallet" to link your BNB Smart Chain-compatible wallet. You can also find this option in the top right-hand corner. Make sure you have sufficient BUSD or BDKMV tokens available for trading, and your balance will be displayed above the token.
3. Check Details and Click Buy/Sell: Review the details of your trade and click the "Buy/Sell" button.
4. Wallet Confirmation: A window with more details will appear in your wallet. Verify that the information is accurate.
5. Confirm the Action: When ready, click the "Confirm" button. Your wallet will prompt you to confirm the transaction.
6. Transaction Completion: Once confirmed, you're done! You can click "View on BscScan" to inspect your transaction details on the explorer.

FAQs

1. What Makes BDKMV Different from other DeFi Projects?

BDKMV introduces a decentralized model in DeFi, channeling the project's generated income directly into the wallets of holders. This unique approach prioritizes immediate value for token holders, fostering an engaged community focused on the project's continued success. The goal is to leverage the community as a cohesive unit to build wealth and power collectively, setting a new standard in DeFi.

2. How does the Rebase work?

The Rebase operation adjusts the token's circulating supply based on changes in token price. BDKMV utilizes a Positive Rebase formula, increasing the BDKMV supply for each holder.

3. How do I Stake?

Staking is automatic with AutoStaking immediately upon token purchase. Hold BDKMV in your wallet, and you'll automatically receive staking rewards.

4. How do I get my Rebase rewards?

Rebase rewards are distributed directly into your wallet every 30 minutes. No need to actively pursue rewards.

5. What are the fees for the trade?

Buying incurs fees of at least 15%, while selling requires fees of at least 20%.

6. Is there a Max Supply of BDKMV?

No, BDKMV is an elastic supply token, and there is no maximum supply.

7. When does the Rebase occur?

The Rebase occurs every 30 minutes, distributing 0.00565% of your tokens in your wallet as staking rewards to BDKMV holders.

8. How is the APY Sustained?

BDKMV utilizes buy and sell taxes to sustain its fixed (static) APY. A portion of each purchase (15%) and sale (20%) goes towards the protocol, contributing to APY sustainability.

9. How are We Handling Inflation?

BDKMV counters inflation with an auto-burn feature that reduces the token supply with each sale.

10. Is BDKMV a DAO?

BDKMV is not yet a DAO but plans to become one. While currently a protocol created for the community, the goal is to transition into a DAO in the near future.

11. What will we do with the Treasury?

The treasury functions as additional financial support for the RFV and is utilized to fund new BDKMV products, services, and projects. The community is envisioned to have a say in deciding the use of funds from the treasury.
