

Lubrication

Vegra Poly-Clean:

Poly-Clean is a cleaning and anti-marking paste for Metal Cylinders in your Offset Press(es).

- Removes oxides and ink remnants from the cylinder surfaces
- Protects and preserves the surface of the cylinder
- Prevents wet inks transferring onto the back pressure cylinder
- Prevents ink sticking to the kite.

To prevent corrosion effects on cylinders of your printing press, we recommend the additional use of Vegra Cylinder Conserver VP130 (below), which contains a corrosion inhibitor.

Vegra Cylinder Preservation Concentrate VP 130:

A VOC-free cylinder preservation concentrate with corrosion inhibitor, designed for the maintenance of plate cylinders, blanket and impression cylinders, as well as roller shafts etc.

Complies with the recommendations of the printing press manufacturers, including MAN-Roland, KBA and WIFAG.

Vegra VP 140 Cylinder Preservation Wash:

VP 140 is a cylinder treatment, that is essential for preparing cylinders before fixing of self-adhesive packings. VP140 is a water-miscible, corrosion inhibiting cylinder treatment, designed to degrease and prepare metallic and ceramic surfaces.

Complies with the recommendations of MAN-Roland.

Vegra Felt Oil VP 611:

A synthetic, acid free and corrosion inhibited felt oil for felt bearer application systems. It works hard under a wide range of operating conditions to lubricate and protect cylinder bearers and other press mechanisms.
