

## **Product Information Sheet**

### **2020 Fountain Solution: V2020 – 10 Litres** **Sheet-fed offset Fountain Solution**

Recommended for the use with Vanson Rubber Base Plus, CML-Oil Based or Tough Tex inks on presses with either conventional or integrated dampening systems. Because of its non-glycerine, alcohol formula, 2020Fount will provide complete transfer of ink with minimum water absorption into ink. The result is brilliant colour reproduction and dark dense blacks. Emulsification and toning are virtually eliminated and the ink film dries immediately.

Recommended for all plates except electrostatic.

#### **Directions**

For metal plates, mix 1 part fountain solution concentrate to 15 parts water.

For direct image plates, mix 1 part fountain concentrate to 7 parts water.
