**READY  
TO BURN**

**This Valentine's Day, if you're enjoying a cosy night by the fire you can do your bit to improve air quality by considering what you burn and how you burn it.**

To reduce pollution, you can burn dry wood and choose a compliant stove e.g. a Defra exempt stove that is Ecodesign Ready to reduce harmful emissions.

Woodsure's Ready to Burn scheme and the SIA Ecodesign Ready stoves help burn wood more cleanly in smoke control areas like London.

**READY  
TO BURN**

**If you're planning a home improvement project this spring now could be the perfect time to replace your open fire place with a less polluting wood-burning stove.**

The greenest stoves – those marked DEFRA exempt and SIA Ecodesign Ready – have been designed to minimise pollution.

Burning fuel approved by Woodsure's Ready to Burn scheme will also help you minimise pollution.
