

1 Remove Packaging
Remove plastic strip if present inside holding groove.

2 Fold sides back
Fold sides back 180° (a) then back to 90° degrees (b) along score lines (press hard) using your hands. Push bill of cap through the holding groove up to dotted line shown on cap above.

3 Fold support wings under holding groove arch - top of bill
Folding the support wings over the top of the bill and sliding them under the holding groove arch works best for most caps.

4 Lock shield in place by pushing top of shield under bill forward
Hold plastic arch on top of bill while pushing top of plastic shield below the bill forward so it bows outward. This will tension-lock the shield to your hat. Adjust final position of shield and support wings as required.

5 Fold support wings under bill
While holding the bill of the cap and using your thumb to prevent the shield from coming off the bill, fold support wings completely under the bill as shown to initially position the shield. (This option may work better for some caps)

Installation video tutorial
