

## Smart Pro Volvo\* Dongle ADA2100 Code D856910AD

September 2023

The timesaving solution for programming Volvo\* slot and proximity keys.

### What does the software do?

The dongle connects directly to the vehicle OBD socket to read the security data from the vehicle ECU, freeing up Smart Pro for other jobs. The dongle will store the reading session, meaning that if interrupted it will resume from where it was last read. No data is lost so the job can be done in several sessions if needed. Once the security reading is complete (indicated by the LEDs on the Dongle), the Volvo\* dongle is connected via USB to the Smart Pro to transfer the security information. The key programming procedure is then completed by following the guided process in Smart Pro.

### What else is needed?

Smart Pro

### ADS2334 Software

The timesaving solution to free up Smart Pro during the several hours needed to read security data

> Full Support at [www.mykeyspro.com](http://www.mykeyspro.com) under "Guided Processes".
