

LUNADA BAY TILE - GROUTED SAMPLE BOARDS

Grouted Sample Boards are an excellent tool for showroom display and supporting design decisions on site.

- Provide compact representation of installed tiles.
- Authorized LBT Dealers can select individual sample boards presented in a series Planogram, or from any available series, size, color (and finish).
- Board measurements are commonly available as 6 x 12", 8 x 12", and 12 x 12", depending on the series.
- Tiles are installed on MDF with the back and sides painted for a finished presentation.
- Grout color for the sample board is identified on the back label and is usually the same grout color as seen on the LBT website product photography. *
- Weight averages 2.2 - 4.5 lbs, depending on board size and tiles displayed.

* Some tiles from Namibia, Momentum, etc were designed with the intention NOT to be grouted and sample boards will be produced per those recommendations.
