

Cutout

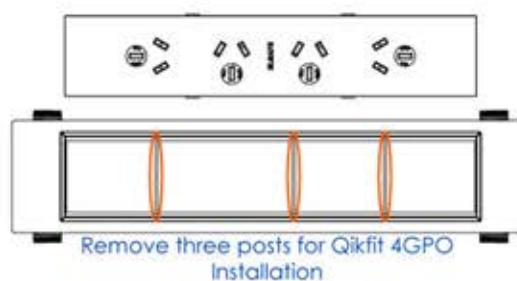

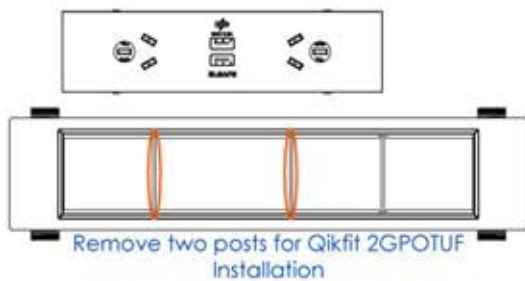

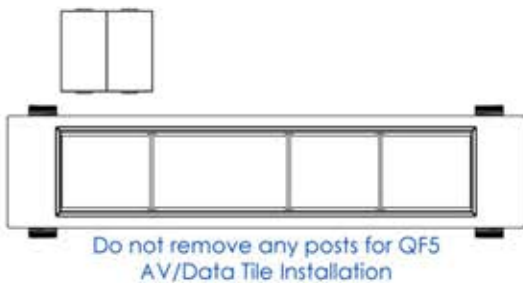

Cutout Dimensions

Product	Dim A (mm)	Dim B (mm)	Panel Thickness (mm)
Qikfit - 2 x GPO	130.5	41.5	3.0
Qikfit - 4 x GPO	230.5	41.5	3.0
Qikfit - Data plate	130.5	41.5	3.0

Mounting of QF Items in Thick Panel Frames

The three posts moulded into the frame are integral to the stability of the Thick Panel Frame. For installation of data (can fit up to 9 x QF5 tiles), these posts will stop distortion to the straight lines of the frame. For Power or TUF configurations, these posts can be easily removed to accommodate the module as per below.

Thick Panel Frame

The Qikfit Thick Panel Frame has been designed to accommodate the Elsafe Qikfit Series in a screen or other surface from 3mm to 14mm thick. The sleek and easy to install frame comes in white, black or grey in a QF45 size only. This is a brilliant cost effective mounting method that can be installed in a range of different configurations.

Technical

The Thick Panel Frame comprises of three parts: the Frame which is made from Polycarbonate and two frame clips which are made from a Nylon 6/6 to allow

the clip to spring as required. The clips are able to be adjusted for height variations in panels 3 – 10mm and panels 6 – 14mm thick.
