POWER OF ACTIVE CHLORINE DIOXIDE

Why Wuzawart?

Wuzawart wart remover is an easy and painless home remedy for stubborn warts.

Wuzawart contains **DioxiCare**[®], a proprietary Chlorine Dioxide Complex™ along with glycerin to quickly penetrate the wart tissue and attack the papilloma virus which causes the wart. This virus is anaerobic (wants to avoid oxygen) and highly susceptible to DioxiCare's powerful oxidizing action.

Wuzawart is nontoxic and gentle on the skin.

Applying Wuzawart is easy

Directions For Use:

Dispense **Wuzawart** directly on wart, in enough quantity to cover entire wart, and rub in well. Apply twice a day. Do not rinse off. Results may be seen as early as 2-3 weeks for newly formed warts, and 6+ weeks for old warts, or plantar warts on bottom of foot. Part of the wart may turn black when virus is killed, as seen below:

Precaution: Wuzawart may bleach clothing or carpet. Allow to dry before contacting these materials.

Wuzawart in action...

See below progression after 5 weeks of treatment.

Picture 1
During first week
of treatment.

Picture 2
After 3 weeks of treatment
1x/day. Virus killed and
wart turned black.

Picture 3
After 4 weeks of treatment
the dead viral material
fell out. Treatment no
longer required.

Picture 4
After 5 weeks, warts are
completely gone.
