

Capsule Light Overview

Mood Lighting Fixture

Using traditional felt molding technologies and local manufacturers as a source of inspiration, the Capsule Light explores felt's natural beauty as a material for diffusing light. Material density softens and directs light, producing relaxing atmospheres that range from warm and relaxed to psychedelic and fun.

Materials Shades are made from 100% wool. Wire and nylon edge band. Electrical components.

UL Listing The electrical components in this product are UL listed. If you have any safety concerns please feel free to contact us. UL listing for commercial applications is available upon request. Please contact us for additional information.

Assembly Two elastic cords hold the Capsule shades together. The cords are inserted into a plate that screws on to the lamp holder. These can be easily removed for disassembly and replacement.

Cleaning To clean the shades, steam the dirty area and then clean it gently with a damp cloth. Let it dry and repeat as necessary. If you are unable to remove a stain using this method, let the shade dry completely, then lightly apply medium-to fine-grain sandpaper until you have removed the stain.

Damage Apply steam to the dent from the outside while gently pressing and smoothing the inside of the shade back to its original shape. Repeat as necessary and let dry.

Hardwiring Hardwiring kits are sold separately.

Capsule Light Environmental

Origin Capsule lights are handcrafted by one of the last remaining hat manufacturers in the United States. The manufacturing facility was selected based on its proximity to our studio, as well as for its practices and labor conditions.

Design The shape, colors and details are the result of employing the manufacturer's skills and technology to create a product that fits an alternative and growing market. In addition to being designed for easy disassembly for composting, the lamp requires the use of energy-efficient, compact fluorescent bulbs.

Renewable

The components in this product are made from wool felt harvested from sheep. Because sheep grow new coats of wool throughout their lifetimes, this animal-derived material is considered a renewable resource. Wool production relies on the organized farming of sheep world wide to maintain a steady supply of the raw material.

Biodegradable

Because wool is an animal-derived material the shades will biodegrade under the right set of conditions, including temperature, humidity, light and the presence of microorganisms. These shades can be shredded and put in a composting bin or buried to biodegrade over time.

Active sustainability

This product generates a positive and quantifiable environmental impact each time it is used. Active sustainable products transform daily activities into acts of environmental conservation.

Capsule Light

Create an atmospheric glow that is inviting to sight and touch with Capsule Lights. This modern pendant consists of two molded felt shells, one in color to direct light and the other in white to diffuse it. Cluster them over a dining table, living room or foyer or use them as glowing night-lights in a nursery. The shades are hand crafted by one of the last millineries in the US, using wooden hat blocks from the 1800's to give them their shape.

Capsule Light

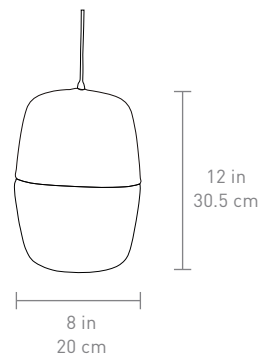

Philosophy

Capsule Lights are a design exploration of traditional millinery processes and industrial craft. The design bridges markets from past and present and highlights felt's natural beauty and its various tactile, visual and environmental properties.

Design

Capsule Lights are hand crafted by one of the last remaining hat manufacturers in the US. The shape, colors and details are the result of employing the manufacturers skills and technology to create a product that fits an alternative and growing market. In addition to being designed for easy disassembly for composting, the lamp requires the use of energy efficient bulbs.
