

Shroom Light Overview

Customizable Light Fixture

Using traditional felt molding technologies and local manufacturers as a source of inspiration, the Shroom Light explores felt's natural beauty as a material for diffusing light. Material density softens and directs light, producing relaxing atmospheres that range from warm and relaxed to psychedelic and fun.

Materials Shade is made from 100% wool. Frame is powder coated carbon steel.

UL Listing The electrical components in this product are UL listed. Shroom lights require the use of compact fluorescent bulbs. If you have any safety concerns, please feel free to contact us. UL listing for commercial applications is available upon request. Please contact us for additional information.

Installation The felt shade is held on to the powder coated steel frame by two nylon sleeves that are sewn into the inside of the shade. The shades can be easily removed for disassembly and replacement.

Cleaning To clean the shades, steam the dirty area and then clean it gently with a damp cloth. Let it dry and repeat as necessary. If you are unable to remove a stain using this method, let the shade dry completely and then lightly apply medium-to fine-grain sandpaper until you have removed the stain.

Damage Apply steam to dents from the outside while gently pressing and smoothing the inside of the shade back to its original shape. Repeat as necessary and let dry completely.

Shroom Light Environmental

Origin Shroom Lights are made in the USA from locally sourced materials.

Design Shroom Lights are hand-crafted by one of the last remaining hat manufacturers in the US. The shape, colors and details are the result of employing the manufacturers skills and technology to create a product that fits an alternative and growing market. In addition to being designed for easy disassembly and composting, the lamp requires the use of energy-efficient compact fluorescent bulbs.

Renewable

The Shroom Light's shades are made from 100% wool felt that is harvested from sheep. Wool is a renewable resource, as the sheep will keep growing new coats of wool over their lifetime. The production of wool felt relies on organized farming of sheep world wide, maintaining a steady supply of the raw material. Shroom Light's wool is sourced and processed in Pennsylvania.

Biodegradable

Because wool is an animal derived product, it will biodegrade under the right set of conditions. The Shroom Light's shades can be shredded and put in a composting bin or buried to biodegrade over time.

Shroom Light

Keeping monsters at bay and your nightstand glowing are just a few of the talents Shroom Lights have to offer. Designed as mood lighting for tabletop and floor use, Shroom Lights are ideal night lights or mood lighting in clusters around living rooms and bedrooms. Their warm light, soft felt shades and rocking wire stands are inviting to both sight and touch.

Shroom Light

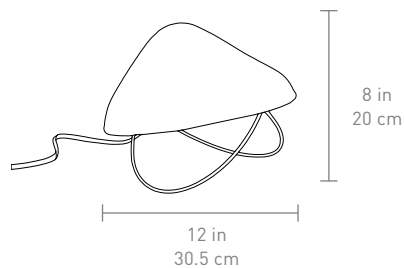

Philosophy

Shroom Lights are a design exploration of traditional millinery processes and industrial craft. The design bridges markets from past and present and highlights felt's natural beauty and its various tactile, visual and environmental properties.

Design

Shroom Lights are hand crafted by one of the last remaining hat manufacturers in the US. The shape, colors and details are the result of employing the manufacturer's skills and technology to create a product that fits an alternative and growing market. In addition to being designed for easy disassembly for composting, the lamp requires the use of energy efficient bulbs.
