## What Are Switchracks?

### LEI SWITCHRACKS FOR POWER CONNECTION

More than 30 years of packaging switchracks for a wide range of industries makes LEI your only choice when selecting a vendor who provides both quality and service.

Our expertise in PLCs, switchgear assemblies, and industrial controls ensures that we supply the best packaged solutions to our customers. Our resources also include both in-house and field service repair and maintenance capabilities, minimizing downtime for our customers.

- ✓ Practical solution for providing power to a facility's load locations.
- ✓ Matching control panels to various load requirements within a facility.
- ✓ Managing power distribution within hazardous area locations.
- ✓ Permits easy and targeted shutdowns for maintenance and repair.

# COMMITTED TO: EXCELLENCE, EXPERIENCE, KNOWLEDGE & RESOURCES

## Your Partner for Power Distribution, Don't Settle for Less.

- In-house engineering to ensure best practice assembly and design.
- 30-plus years of supplying switchracks.
- Factory trained and certified technicians.
- In-house UL listed control panel fabrication.
- Electrical PE certification.
- Extensive experience in product selection ensures the perfect pairing of technology and application.
- Variable Frequency Drive (VFD) experience and application.

## LEI - Customers

**Wastewater**

**Petrochemical**

**Irrigation**

### Who Uses Our Switchracks?

We have supplied switchrack assemblies to a wide variety of applications over many years.

Industries served include: Petrochemical, Cement & Aggregate, Textile, Water and Waste Water, Irrigation, Steel, Aluminum, Pulp & Paper, and any facility requiring distributed power points in any given area of your manufacturing and operational processes.

### Why LEI Switchracks?

- Certified in-house welders.
- In-house electrical integration team.
- In-house engineering and design.
- Custom designed equipment.
- Turnkey projects.
- Proven standard of work with our customers being our best testimonial.

### Why Use Switchracks?

When a facility covers a wide area, it is more practical to have individual panels controlling and distributing power from racks with exactly the output devices for that section of the facility in any given area.

Power supplied by a series of switch racks enables one section to be shut down for maintenance while other sectors remain fully powered up.
