

Memory Foam Sofabed Mattress

The Stylus memory foam sofabed mattress is made exclusively for Stylus

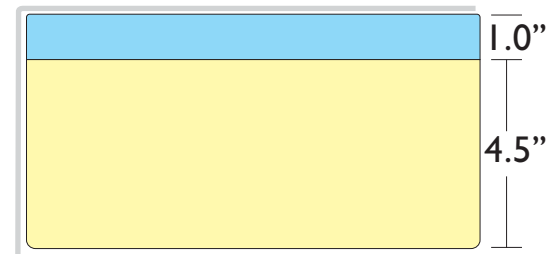

Our goal was simple - to have the most visually impressive and comfortable sofabed mattress on the market in a simple to use system. No gimmicks, just real comfort.

Basic knowledge of Memory Foam:

- Temperature sensitive
- Contours to the customers individual body
- Disperses weight evenly over the entire mattress
- Reduces pressure points
- Reduces tossing and turning to improve quality of sleep
- The uniform support allows for ideal spine alignment
- Increases blood flow essential to a healthy body
- If one person is moving on one side of the mattress, the person on the other side feels little

Construction

- Top layer: 1 inches of gel memory foam
- Base layer: 4 ½” inches of virgin foam for support and consistency
- Four way stretch fabric cover. FR rated to meet California TB 603 requirements
- Anti-skid bottom surface to prevent sliding

Fabric - Memory Foam Mattresses:

The four way stretch fabric is an essential accompaniment to a memory foam mattress. This prevents a hammocking effect that occurs with non-stretch fabrics. Hammocking radically decreases the benefits of memory foam as the resistance in the fabric prevents the memory foam from completely conforming to your body.
