WerkMaster Handle and Applicator Pad

- 006-0140-00 - Pad Holder
- 006-0141-00 - Handle
- 006-0138-00 - 18" Scrub Pad
- 006-0139-00 - 18" Finish Pad

Always test a small area to ensure your products and systems are compatible with the installed polished concrete flooring system. Ensure all sealers and coatings are fully cured before the application of any maintenance products. Always read and follow manufactures directions. Follow all safety guidelines as directed.

Allow floor to cure for a minimum of 7 days prior to application of our Maintenance System

Daily Maintenance

Surface Condition: Your floor is dirty and has dulled down slightly.

1. Wipe Up spills immediately using a damp cloth.
2. Dust mop regularly to maintain dust-free, slip-resistant surface.
3. OPTIONAL: Using ULTRAclean HiLite, clean floor with mop/bucket/wringer and/or auto scrubber and pad. Dilute cleaner to manufactures recommendations.
4. Using mop, clean along edges and around stationary objects machine did not reach. Chewing gum will often release during normal cleaning. If not, lift off (DO NOT SCRAPE) immediately after cleaning.
5. OPTIONAL: Using pink buffing pad or equivalent, buff floor with WerkMaster machine or burnisher.

Restorative & Periodic Cleaning

Surface Condition: Your floor is dirty and dull and some of the sealer has worn off.

Follow steps 1 – 5 as in daily maintenance

Resealing the floor

Prior to starting, apply ULTRAGuard to sample area of each type of surface to be treated, using application procedures proposed for the project. Confirm that floor surface is receptive to ULTRAGuard

1. Apply 1 thin coat of ULTRAGuard using a pump-up sprayer and microfiber applicator.
2. Spread evenly over floor; avoid puddling. Allow to dry 45 minutes.
3. If buffing, use a high speed burnisher or WerkMaster machine and pink pad or similar pads.
4. Apply a second coat of ULTRAGuard repeating Steps 1 and 3
