

Danetti – the perfect fit in your home.

We want to help ensure that your new Danetti product will not only fit comfortably in your home, but be delivered with no fuss, so we have created this helpful guide for you to run through before you purchase.

Before you buy

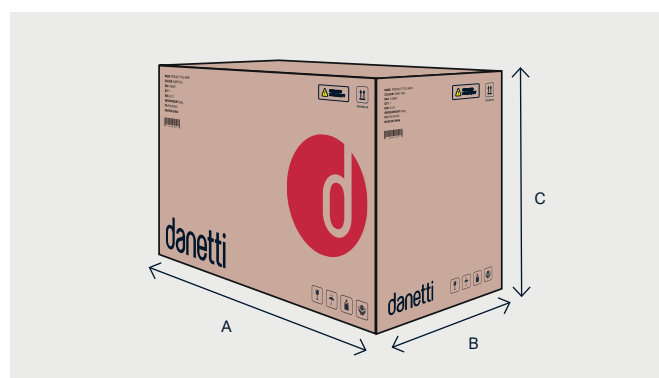

You might find it helpful to mark out the width and depth of your chosen product on the floor where you are choosing to place it with masking tape, to check that you are comfortable with the size and proportions. Please note all product dimensions on our website are approximate to within 2-3 cm.

The delivery

To estimate the size of your item on delivery, we recommend you **add approximately 5cm to the product dimensions** to allow for packaging. Please note that some items such as beds are delivered in multiple boxes and will require assembly in your room of choice.

Take note of your measurements

- A. Product Width
- B. Product Depth
- C. Product Height

Plan your route

When planning the journey of your new product to your room of choice, start from the delivery van. Remember to take note of any potential pinch points such as gates; door openings; corners and stairwells.

To ensure a trouble-free delivery we recommend that you move any obstacles that could get in the way such as wall art, stairgates, or other furniture.

Remember: Boxes can be rotated through gaps so make sure:

The height of the box is smaller than the height of the gap.

The depth of the box is smaller than the width of the gap.

1. Doorways
2. Obstructions
3. Permanent Fixtures
4. Stairways & tight turns
5. A clear path
6. Outdoor areas

Potential problem areas

Outdoor area

Don't forget to measure the space outside your front door. Be mindful of any gates, porches, pathways, flower beds etc. If in an apartment building always remember to check building lobbies, lifts, and hallway measurements before ordering.

Doorways and hallways

Measure all internal doors and doorframes to ensure the items can fit into your room of choice. Measure all dimensions of the hallway, ensuring the shortest measurement of your item is less than the width of the hallway.

Obstructions

It is important to open the doors as far as possible and measure the smallest internal gap. Be mindful of radiators, shelving or any items on your stairwell that could cause obstructions. Also consider any doorhandles, handrails and wall fixtures on your route.

Permanent fixtures

Take note of measurements of any fixed obstacles which may interfere with your delivery. This can include light, wall, or floor fixtures.

Other helpful measurements

If the delivery team will need to use a lift to get to your property, this will also need to be measured.

Check if there is a weight restriction in the lift and compare it to the packed weight of your product.

Measure the internal dimensions of the lift to ensure that the measurements are greater than the product.

- A. Lift Width
B. Lift Depth
C. Lift Height

Stairways and tight turns

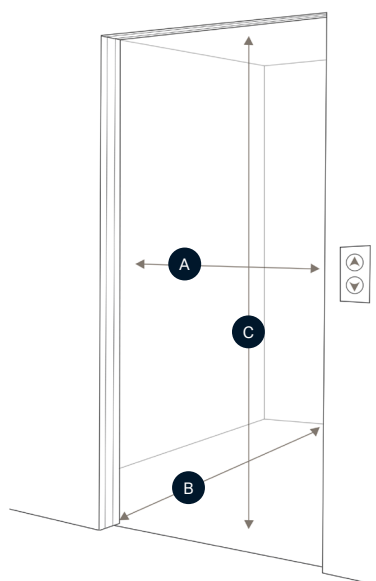

If your route includes any challenging corners or stairwells, check the following:

- Note the width of your stairs at their narrowest point. Check the height of your box and ensure it is smaller than the dimensions of your stairs.
- If your item must turn a tight corner or rotate in a small space, please ensure that the height from the floor to the ceiling in this area is bigger than the width of the box.

If you have a banister that the box needs to be lifted over, please check that the height between the top of the banister and the ceiling allows enough space for the depth of your item.

A clear path

Plan and clear your path. The quickest route may not always be the easiest, so prepare for any tricky turns. Don't forget to clear your room of choice and make space to place the new furniture. To protect your floor from any accidental damage, ensure it is covered prior to delivery.

If you have done your checks and are happy that the product will fit, you are ready to place your order.
