

Barrel Length Selection Guide: Alternate Material

Millwork, glass, stone, etc.

Configuration

Use alternate material mounting plates. Either single (22.2.5), double linear (22.2.4), or double diagonal (22.2.6) depending on the configuration desired. Follow through to the next steps to determine barrel depth.

single
22.2.5

double linear
22.2.4

double diagonal
22.2.6

1. Material Thickness

Determine material thickness.

If the material thickness is not standard, select the closest thickness.

6.35mm (1/4")

Standard barrel

19mm (3/4")

Medium barrel

31.75mm (1-1/4")

Long barrel

2. Barrel Depth

All operable components are available in standard barrel depth. Only selected components available in medium & long barrel.

Material Type

Is the back end of the material easier to machine down (hardwood, MDF) or shim up (stone, tile) to reach either 6.35mm (1/4"), 19mm (3/4"), or 31.75mm (1-1/4") thickness?

Machine down (suitable for soft material)

Shim up (suitable for hard material)

Additions

Depending on the material, there are additional tools you can use to make your installation easier.

Use the trim cap when installing into a wet surface such as tile/grout, plaster, et cetera. One trim cap required per component. They may be reused.

Use a router template for alignment and as a guide for routing. Depending on the material, use with a guide bushing or 36.5mm (1-7/16") Forstner bit, or CNC to cut holes in finish material.
