

Sunproof fabric is woven from 100% solution-dyed olefin yarn, which is a clean manufacturing process as the color is added before the yarn is extruded. It is environmentally friendly because no dye bath processes are used, eliminating waste effluents, which may pollute air and water.

Sunproof fabric is 100% recyclable.

Sunproof applies excellent ultraviolet-blocking agents which protect the fabric from the effect of UV radiation. This makes Sunproof fabric resistant to UV damage & fading. As an outdoor fabric, Sunproof is proven to have a strong ability to withstand the effects of prolonged exposure to sunlight, wind, rain & humidity. Sunproof has obtained a UV standard 801 certificate meaning it is capable of blocking more than 97% of UV Rays.

Sunproof fabric has gone through a special treatment to reduce the absorption of soil and stains making it extremely stain-resistant. It is also protected by an invisible shield around each fiber to make it moisture-repellant.

Sunproof is safe for direct skin contact and is Oeko-Tex certified. It is free from substances that might be harmful to humans & the environment.

Lastly, Sunproof fabric has been specially treated with sanitized products for hygiene protection. This prohibits microbial development & mould stains.
