CANDLE CATALOG

# Our Story

Classic Farmhouse Candles was founded in 1998 by Carolyn Heimerl in Beaver Dam, WI. With a flair for phenomenal fragrances and trending, beautiful colors, Carolyn started making candles in her kitchen. She quickly realized that there was a much larger market that demanded her incredible creativity and passion to produce a far superior candle.

In keeping with the spirit that Classic Farmhouse Candles was created in, all of our candles and melts are still hand-poured in small batches at our factory here in the USA!

Our newest creation, Organic Garden, offers a serene stroll through a garden of scents that are refreshing for your soul.

Organic Garden features sustainably sourced soy waxes, beautiful dried herbs and botanicals as well as eco-friendly, recyclable and compostable packaging!

Our "Original 3-Layer" and "Classic" collections will transport you on a journey of memories from simpler times and Grandma's farm kitchen...

The Original 3-Layer candles and Classic collections feature warm cinnamon, sugar, spices and vanilla, hearty, roasted nuts, tantalizing fruits, fresh florals and holiday favorites. A scent for every season and every reason! Combined with beautiful, current colors, these candles and melts will complement any decor!

These are a few of my favorite things:

Available in  
WICO21 - 3 oz Cup  
Ice Cream Melt

**O22 - Watermelon Sorbet**  
*A burst of juicy, ripe watermelon with a finish of vanilla sugar.*

Available in  
WICO22 - 3 oz Cup  
Ice Cream Melt

## Frequently Asked Candle Questions

### Are Classic Farmhouse Candles and Wax Melts safe to use?

Yes, you can be reassured that numerous independent and authenticated studies have confirmed that candles are safe to use when burned following manufacturer instructions. We offer safety guidelines on all of our candle and melt packaging.

### What type of wax do you use in your candles and wax melts?

All of our jar/pan candles are made with a proprietary soy blend wax that has been specially formulated to maximize both hot and cold scent throw. The Organic Garden Melt Bars, Classic 3-Layer Melts, Classic Farmhouse Wax Bits also feature a soy blend wax. Our Organic Garden Tart Melts and Melt Bars are 100% sustainably sourced organic soy wax.

### Do your fragrances contain essential oils?

Our fragrances contain essential oils as well as other safe and tested carrier oils that do not affect the safety or scent of the candles and melts.

### How long do jar/pan candles burn?

Candle burn times will vary based on the depth of the candle:

Cast Iron Pan Candles - 12-18 hrs

12 oz organic jar - 48-72 hrs

14 oz mason jars - 65-90 hrs

Fragrance may also affect candle burn times.

### Why does the wick of my candle sometimes form a mushroom shape?

This can happen if soot accumulates on the wick of your candle. Simply extinguish the candle, cut the wick with a scissors or wick trimmer and re-light.

### How do I avoid my jar blackening?

To avoid soot deposits on your candle, trim the wick of your candle before each new use (using a scissors or wick trimmer). If there is soot on the glass of your candle, you can clean it with damp paper towels.

### How do I reduce the size of my flame?

To avoid large flames on your candle, trim the wick of your candle before each new use (using a scissors or wick trimmer).

### Why my candle is not burning all the way to the edge?

To ensure that your candle burns properly and does not 'core', please allow the candle to burn after lighting until the wax has pooled all the way to the edge of the container (approx. 3 hrs), before extinguishing.

### Why is there still wax left in the bottom of my candle?

For safety reasons, our candles will self-extinguish at the end of the candle, with some wax remaining, usually around 1/2 inch. This is to prevent the glass base of the candle overheating.

### Can I reuse my empty jar/cast iron pan?

If you wish, you can reuse your jar/pan once it is empty. It can be used for a variety of decorative reasons, but should not be used as a candle again, or for storing or cooking any food items.

### Can I warm my Cast Iron Pan Candle on a stove?

For safety reasons, Cast Iron Pan Candles should only be burned using their wicks. Do not attempt to heat your candle using your stove.

## Frequently Asked Wax Melt Questions

### How do I use a wax melt?

Our wax melts should be used in a melt warmer. Just place the melt or a piece of it in the top of the warmer. If you are using a conventional warmer, you will need to place an unscented tea light candle in the bottom of the warmer. If it is an electric warmer, simply plug it in and turn on.

### How long do wax melts last?

Wax melts will stay fragrant for approximately 8-12 hrs per oz. If your wax melts weigh 3 oz., that equals approximately 24-36 hrs.

### What type of wax melter should be used with Classic Farmhouse/Organic Garden wax melts?

Our wax melts can be used in any type/brand of tea light or electric wax warmer. Please follow warmer manufacturer instructions for use.

### Why is my wax melt not melting right away in my cast iron wax melter?

It takes a little while to heat the cast iron to a temperature that is warm enough to melt the wax. Once the wax receptacle has heated, your wax melts will start to melt.

### What type of tea light candle should I use with my cast iron wax warmer?

The best tea light to use are unscented, metal casing tea lights. We do not recommend using plastic casing tea light candles.

### Why is my wax melt no longer fragrant while there is still wax left in the warmer?

There will always be some wax left in the warmer when you are finished with your melt because the wax is warmed and not burned like a candle. When a candle burns, the wax and fragrance are 'consumed' as the candle burns down. When you warm a melt, the fragrance is released, but the wax is not consumed. The unspent wax will remain in the receptacle.

### I would like to change scents or clean my cast iron wax warmer. How do I do that?

To clean the warmer or change your melt scent, simply place the warmer in the freezer for a while to harden the wax melt. Simply invert the warmer receptacle and the wax will pop right out once it has hardened! Wipe the sides and bottom of the warmer and you are ready to go!
