

DeepWavePRO

Hand Held Red Light Therapy

Experience the power of advanced red light therapy with our revolutionary DeepWavePRO handheld device designed for medical professionals. Combining cutting-edge technology and unparalleled strength, this portable wonder delivers precise and convenient red light therapy for rejuvenation, vitality, and overall well-being. Featuring red LED ultra-high efficient diodes with an irradiance of 121mw/cm².

For optimal results and safety, use the device half an inch to an inch away from the skin. Do not keep the device in one spot for more than a second or two due to the strength of the diodes. Instead, use a sweeping motion, moving the device up and down the treatment area. This technique ensures even exposure and enhances the therapy's effectiveness.

Benefits of the **DeepWavePRO**
