

**Dearest Senada Bikes fans,**

Here are some Assembly and Operation Tips for your new bike (2023 updated):

**1. How to install the pedals:**

The left pedal needs to be tightened counterclockwise, the right pedal is tightened clockwise.

The thread of the pedal and crank arm needs to be aligned carefully, if the thread is misaligned, the crank will be mangled or cross-threaded.

It is suggested to tighten the pedals with a pedal wrench, use some anti-seize compound if have.

**2. How to install the front wheel:**

First of all, please make sure the suspension fork is at the right position – the arch on the fork is in front, the headlight and front fender are both installed on the arch:

To install the front wheel, first, align the brake disc properly between the brake pads in the caliper.

Then, insert the front axle into the fork dropouts, and hand-tighten the axle nuts.

Now, lower the kickstand so the bike will stand on its own, then use the wrench to fully tighten the nuts on both sides.

Make sure to tighten the nuts securely to ensure that the wheel is properly attached.

**3. How to turn on the bike:**

- 1) Install the fully charged battery on the bike;
- 2) Insert the ignition key on the battery
- 3) If there is a battery power button, press it on
- 4) Long press the M button on the display to turn on the system;
- 5) PAS 1 or 2 is the recommended starting speed (PAS 0 means no motor assist);
- 6) You can ride the bike by using the twist throttle or pedals (with power assist).

#### **4. About serial number:**

The serial number of the bike frame is labeled either on the head tube or bottom bracket.

In addition, there is a serial number on the battery and on the motor.

#### **5. Tips about the battery:**

(1) Keep it at a dry place, keep the temperature around 32 °f to 68 °f. Do not charge the battery at a hot temperature or directly under the sunlight. Keep the battery away from fire.

(2) Try not to overcharge the battery too often or leave it on the charger for too long.

(3) Recharge the battery when it is about 30% left.

(4) Even if you do not use it, do not leave the empty battery uncharged for too long.

Need a spare battery? Please visit: <https://senadabikes.com/collections/accessories>

If there are any issues with the bike, please do not worry, just contact us with some photos/videos and a brief description of the issue, we will provide the best help we can to solve all the problems for you.

Have fun with your new e-bike, the adventure awaits on your next ride!
