

# Vice Breaker

Your partner in  
stopping smoking

## How our natural proprietary blend can help you quit smoking

**Vice-Breaker's** natural proprietary components work together to help reduce anxiety, tension and nervousness, which in turn, helps to calm nerves and reduce cravings. **Vice-Breaker** acts as a barrier to block nicotine receptors in your brain, making it easier for you to avoid and eventually wean yourself off tobacco.

Our blend can also help the body remove nicotine toxins faster, speeding up the withdrawal process and alleviating symptoms. By soothing irritations and thinning mucous, it helps to heal smoke-damaged lungs and can speed the healing of other damaged tissues.

Our natural proprietary combination of ingredients act as a tonic for the brain. This combination helps calm anxiety, nervousness and stress, and has been very successful in treating those trying to quit smoking.

# VICE-BREAKER™

“Your partner in stopping smoking”

Quitting smoking is not easy. In fact, on average it takes 7 attempts to quit before quitting for good. Choosing the right program can make all the difference.

**Vice-Breaker** works with your body’s natural processes to reduce the effects of past cigarette smoking and help you stop smoking, period.

**Vice-Breaker** is an oral pill made entirely from natural ingredients which has been designed to **REDUCE YOUR DESIRE TO SMOKE** whilst **CLEANSING YOUR LUNGS**.

### What do you have to do?

Take one pill twice a day with liquid.

For best results do not smoke when taking the Vice-Breaker™ product.

### How long will it take?

A maximum of one to two months (though some people find they no longer crave nicotine in as early as two weeks).

### Are there any side effects or withdrawal symptoms?

- No known side effects
- Doesn't contain nicotine or other harmful ingredients
- No withdrawal symptoms

Smoking is both a habit and an addiction.

Habits are affected by your environment. Things in your daily life — something you see or do — act as a cue or a trigger, and you respond by taking the habitual next action. Maybe you reach for a cigarette when you answer a phone call, or pour yourself a cup of coffee.

Addictions are affected by your body’s chemistry. Your brain has receptors that respond to the presence of nicotine by releasing dopamine, a chemical that produces feelings of pleasure. That’s why smoking feels good. But the feeling doesn’t last long, and your body craves more nicotine. Now you’re entering a vicious cycle.

## Why should you choose Vice-Breaker?

- It is a straightforward, easy program to follow
- It is a quick and effective program compared to its competitors
- It is an all natural pill with no known side effects

Side Effect	Patch	Gum	Lozenge	Inhaler	Nasal Spray	Vice-Breaker
