Introductory Design and Technology Projects □

ISBN 9781875219292

Author: Rachael Wilkinson

An essential introduction for engaging year 7 students in Design and Technology. The book takes students through the brief, design and manufacture of two complete projects – An acrylic bag tag and a wooden bookend.

The theory and safety of all aspects of the projects – adhesives, using a drill press, finishing wood etc. are covered in an engaging format with tasks for students to complete to test this knowledge.

Year 8 Design Technology Student Workbook □

ISBN 9781875219278

Author: Rachael Wilkinson

This book reflects a passion for design and manufacture and a love of working with all types of materials. Students are encouraged to create their own design brief and in this book are given a desk tidy project and a steel clock project with accompanying exercises and activities.

My ethos is that students all begin with the same brief, but will end up with an individual final product, which will clearly show their ability. Design Technology has the capacity to cater easily for differentiation and harness the higher order thinking skills, and the book has been written with this clearly in mind.

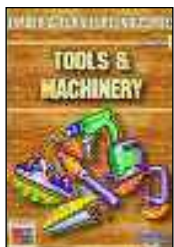

I have been a teacher of Design and Technology for over 18 years, after studying a BA (hons) degree in Woodwork and Furniture design at the University of Central Lancashire in England, and then a post graduate Certificate of Education from the University of Huddersfield, also in England.

TIMBER AND FURNITURE INDUSTRIES SERIES

Paul van Staden

1. Tools and Machinery □

T41

\$56.95

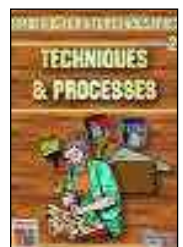

These worksheets are designed to take the practical side of woodwork and put it onto paper to assist the teacher with the hands-on training of the student. The focus of these reproducible worksheets is getting to know the basics of some of the many tools used in the industry. Exercises in this workbook feature: hand tools; measuring tools; layout tools; and machine tools such as the lathe, drill press, band saw, planer etc.

2. Techniques and Processes □

T42

\$56.95

These worksheets relate to the timber and furnishing industry and are designed to take the practical side of woodwork and put it on paper to assist the teacher with the hands-on training of the student. The focus of these worksheets is getting to know the basic techniques and processes of some of the many tools used in the manufacturing industry. The technique relative to the use of these tools is covered in a second workbook.

TIMBER AND FURNITURE INDUSTRIES WORKBOOK SET (T44) \$99 □

Buy both Timber and Furniture Industries Workbooks – Tools and Machinery and Techniques and Processes – with 88 pages of reproducible exercises for the special set price of \$99!

METALS AND ENGINEERING INDUSTRIES SERIES

Paul van Staden

als and engineering industry training. Designed to assist students in getting to know the basic principles of some of the many tools and processes used in the metals manufacturing industry. An excellent source of worksheets for revision, homework or assessment.

1. Tools & Machinery

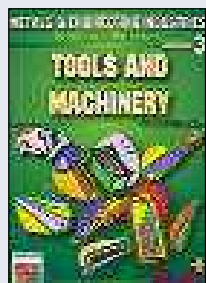

T01 \$56.95

An essential resource for teaching students the theory of metal. This workbook covers hand tools, measuring tools, layout tools, machine tools such as the lathe, drillpress, band saw, milling machine and surface grinder.

2. Techniques & Processes

T28 \$56.95

The following topics are examined in this workbook: cutting, machining, casting, fabrication, joining, marking out, heat treatment and finishing.

3. Tools & Machinery Additional Exercises

T26 \$56.95

This volume expands on the basic principles established in Workbook 1, providing the teacher with reproducible worksheets of theoretical exercises on skills that are essential

to the safe and correct operation of equipment in the metals and engineering industry.

METALS AND ENGINEERING INDUSTRIES WORKBOOK SET (T43) \$155

This pack contains all three of our best-selling Metals and Engineering Industries Workbooks with more than 120 pages of reproducible worksheets.

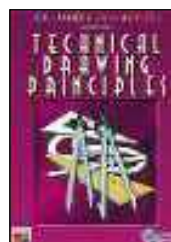

*Buy them as a set and save \$10 on each title!
A fantastic instant resource library for busy teachers of industrial arts and technology.*

Hands on Graphic Design

Erica Michaux

A03 \$56.95

A very popular copyright-free resource for teachers. What separates 'okay' design from 'great' design is not what software a student uses, but how they use the tools to produce their design! The purpose of this book is to provide students with the opportunity to learn the basics of graphic design in a practical way. Hands on Graphic Design looks at the principals of graphic design such as line, shape, texture, value/tone, space, linear perspective, colour, balance, emphasis, proportion/scale, visual energy, logos, advertising and much more. An excellent resource for building the foundation skills of design.

Technical Drawing Principles

Paul van Staden

T03 \$56.95

These worksheets relate to the Technical Drawing aspect of the graphics industry and are not designed to replace the drawing sheet and related drawing tools in the classroom. The tasks found in these worksheets have been structured to assist the teacher in bringing across the basic principles of technical drawing and for the student to gain insight into the various methods. It does not replace the formal textbook on the subject.

Bullying in the Workplace

People Skills Series

Karene Arundell

CE20 \$56.95

Bullying in the Workplace is a training course that offers theory and guides for trainers, managers and staff, including: common forms of workplace bullying and how to identify them; the psychology of the workplace bullying dynamic, and the parts played by bully, victim, bystander and the organisation; causal factors behind organisational bullying; a close look at covert bullying, the most common form of workplace aggression; methods through which to eliminate bullying; the legal repercussions of bullying in the workplace. Included is a series of worksheets designed to educate staff through analysis, interpretation and discussion of workplace bullying.

Trade Maths

MA82 \$56.95

This book is designed as a resource to compliment the teaching of maths in the real world. Everyday real life problems are included. Trade Maths covers the basics for mathematical life skills and includes real life problems. Each section has practical word problems. Real trade and everyday maths concerns are included in the exercises and activities. Maths questions are then given to reinforce the skills associated with the word problems.
