Science Series

Reading Recovery level: 16

Word count: 248

Text type: Narrative

Content: Fiction

Subject: Chemical sciences

ACARA reference: ACSHE022 Chemistry - Year 1 - identifying materials-caring for the environment.

Teacher notes: The natural environment requires care and management. It requires people to avoid polluting and damaging the natural world. This book examines the importance of removal of non-biodegradable materials.

Difficult words: burrow, removes, waste, dung, rubbish, animals, plastic, bottle, grasses, bottles, reused, protect, recycles, glass.

WomWom is in her burrow.
There is dung around the
burrow.

Dung is a way WomWom removes waste from her body. WomWom makes dung. The dung goes on to the soil. Dung is food for plants.

When WomWom goes for a walk on the beach she sees rubbish. She does not know what to do with this rubbish. This rubbish does not help plants or animals grow.

Where should this plastic bottle go? It does not belong on the beach. WomWom sees the rubbish bin.

WomWom smells the rubbish. It does not smell like food. Should WomWom eat it?
