

THE ADVENTURES OF WOMWOM!

THE NIGHT SKY

Simon Saffigna
Robert T. Watts

Reading Recovery level: 18

Word count: 236

Text type: Narrative

Content: Fiction

Subject: Earth and Space Sciences

ACARA reference: ACSSU019 Earth Sciences - the night sky.

Teacher notes: The Australian night sky is filled with many amazing and bright objects. This is an introduction to space science. The book covers the many night sky objects from stars, planets, meteors and satellites.

Difficult words: night, sky, contains, objects, world, satellites, southern, cross, galaxy, planets, meteors, pieces, twinkle, bright.

The sun is going down. The night starts now. WornWe may start eating.

The sky is full of bright things. What are these bright things in the sky?

When the night comes it is dark. It is hard to see things. WomWom still eats grass at night.

Stars are the bright objects in the sky. These are suns a long way from the Earth. All stars all need special places.

The night sky also has planets. These planets circle the Sun as does our Earth. Planets do not twinkle. Can you spot a planet?
