PLEASE NOTE

If your design has edge markings that create a wrap around look on the chips then those edge markings must be spaced exactly on the faces as well as the thread so that they line up with each other when wrapped around (Please see red arrow below).

WRAP AROUND

The wrap around design on the outside edge of the faces must intersect with the same design on the thread

THREAD/RUNNING EDGE

NO WRAP AROUND

The outside edge of the faces and the thread must be the same solid color to cover any potential bleed

THREAD/RUNNING EDGE

CRITICAL IN CONFLICT   FIRST IN COMPETITION
