

LOCATION: 331 MILLER STREET, CAMMERAY
DURATION: 8 WEEKS
CLIENT: DAPCOR

1600 standard clear 6.38 glass panels with custom-made low-e glass panels throughout the 70-unit complex.

The Challenge

This residential project required the replacement of all glass panels across a 70-unit apartment complex to improve energy efficiency and sound within the building. Our client overlooked the project to assist in scheduling access with the residents. Magic Glass was involved with removing and installing approximately 1600 glass panels which included all sliding doors and windows throughout the complex.

The Solution

Magic Glass successfully completed all glazing works for the project. Our team replaced standard clear 6.38 glass that was initially installed into the building with custom-made 10.38 low-e glass, allowing for less sound pollution and greater thermal control within each unit. Being a sizeable project, our team had to obtain sufficient access to each unit in order to ensure each individual panel was measured to the correct size.

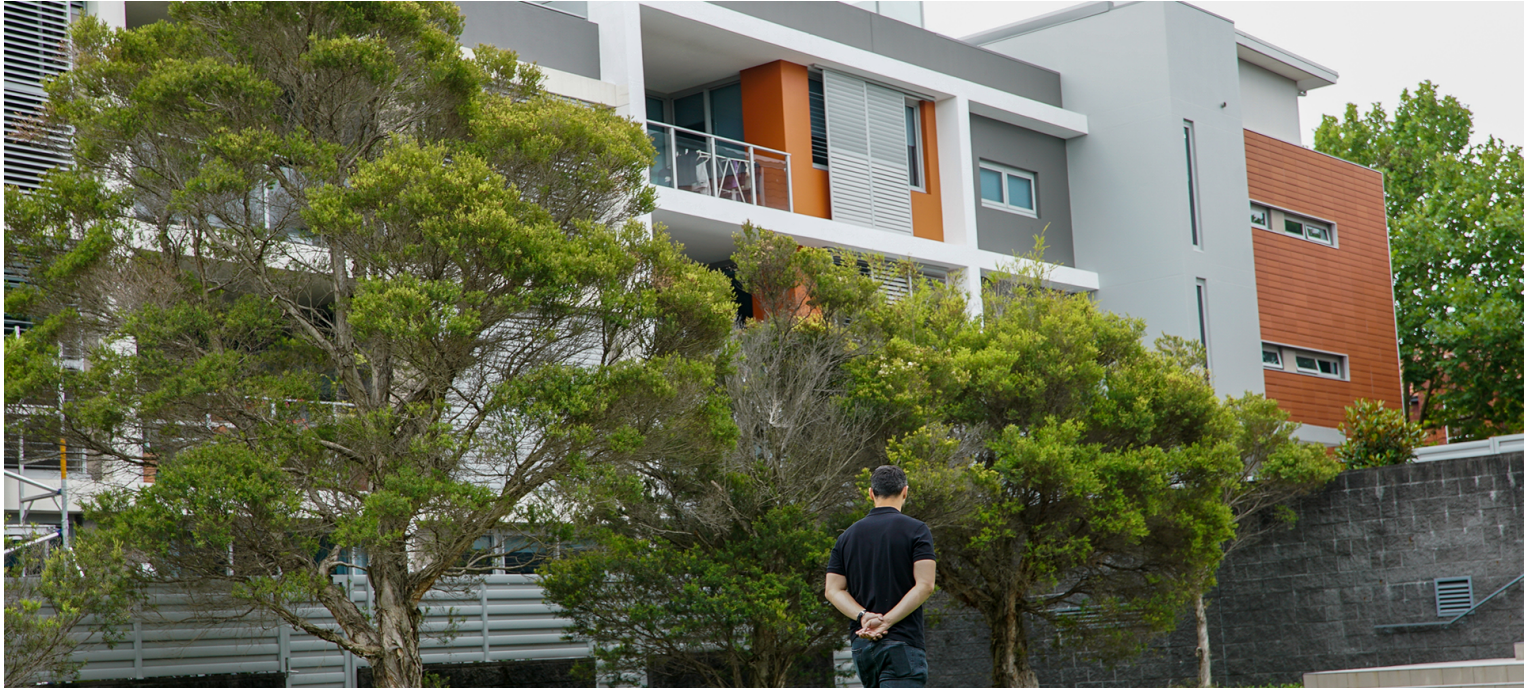

Project Points

✓ Delivery Model

Replacement of 1600 standard clear 6.38 glass panels with custom-made 10.38 low-e glass panels throughout the 70-unit complex.

The Feedback

We were able to achieve deadlines which entailed a very smooth process overall. Excellent feedback from both the residents and our client. We are proud to have been a part of this extensive residential project.
