ROPE ACCESS DIVISION

LOCATION: 1 INNOVATION PLACE, MACQUARIE PARK
DURATION: 2 DAYS
CLIENT: JLL

Installation of safety nets above the glass awning of a commercial building

The Challenge

This project required the installation of safety nets above the glass awning of a building to prevent falling rocks from the roof above damaging the glass.

The Solution

The Magic Glass Rope Access Division successfully completed the project. As it was a very tight area, with very limited space, there were challenges surrounding gaining sufficient access to the top of the awning. By employing rope access techniques to reach the top of the awning, the Magic Glass team were able to gain sufficient access to the area and install the nets efficiently.

The Feedback

The feedback we got from our client was very positive. They were happy with the quality and outcomes of our work.
