Water Based Conversion Varnish

The product which was selected for your piece is ideal for customers who desire the natural color of wood, and the protection of a varnish. Water based conversion varnish is very low VOC, LEED compliant and meets environmental air quality standards. It is specifically formulated for high end furniture. This product provides exceptional surface hardness and water resistance. We stand by our craftsmanship and recommend you adhere to these guidelines to get the most from your piece. The character and patina of reclaimed lumber is quite unique and needs to be attended to more carefully than standard wood pieces.

Before you use any wood care or finishing products, read *any and all* information posted on the bottle or container and use only at your own discretion. We always recommend testing on a discrete area of the furniture piece first. For any types of maintenance, care or cleaning beyond that which we include on this sheet, we recommend you consult a professional finish and repair service for further advice or assistance.

General Daily Care

- Normal dusting and cleaning can be done with a damp rag. Be sure to wipe it dry with a second dry rag.
- Contact with extreme temperatures is likely to cause damage and should be avoided.
- Sitting water and prolonged contact to moist/wet objects is likely to cause damage and should be avoided.
- Products containing silicone, acetone and denatured alcohol are likely to cause damage and should be avoided.
