Sandpaper

Paint Set

WARNING:
CHOKING HAZARD
Small Parts.
Not for children under 3 years.

STEP 1

Sand each piece of wood
Look for the grain of the wood
Sand WITH the direction
of the grain

STEP 2

Using 4 Nails
Nail 2 A pieces to the center of the
square base

STEP 3

Repeat Using 4 Nails
Nail 2 more **A** pieces on top of the first 2.
Notice we are alternating the center with the A pieces as we build our candy tower.

STEP 4

Repeat 2 more times for a total of 4 layers of A pieces nailed together forming the candy tower above the base

STEP 5

***IMPORTANT**
the center Slider piece will need enough space to slide freely back and forth.

Spend extra time sanding the Center Slider piece to ensure it will slide smoothly.

Using 4 Nails
Nail the 2 Side Slide pieces. Make sure each Side Slide piece is lined up with the outside of the tower.

STEP 6

Using 4 Nails
Nail the Top piece with attached jar lid to the top of the candy tower.

Be careful not to damage the lid while hammering.

STEP 7

OR

Remove the Center Slider.
Using 2 Nails

Nail the Angled Front piece on,
(notice the slant may go right to left or left to right.)
Be careful that the **Angled Front** piece won't interfere with the Center Slider Piece.

YOU DID IT!

Insert the Center Slider first, then insert the 2 wooden handles. You may need to gently tap them with a hammer.

Wash the jar before filling with your favorite round candy or gumballs.

If candy ever gets jammed simply turn the Candy Dispenser upside down and slide the Center Slide back and forth.
