Shuddhata Aapki Sehat Ke Liye

Cooking oil is essential to the Indian diet. But, the same cooking oil which adds the aroma and taste to your food also adds the risk of acidity, increased blood pressure, increased sugar levels, heart health complications, brain haemorrhage, paralysis, and many other severities to your health.

Cooking oils not processed with Oildok create acid imbalances in the human body and lead to TRI-DOSH. This filtration system uses an utterly natural filter to offset these and other harmful elements and makes you stay away from chronic health issues. We developed Oildok as India's first oil purification solution so your loved ones can enjoy the taste of good food and healthy life.

Mostly the cooking oil might have harmful impurities and chemicals. Oildok extracts the unwanted water levels, acidity-inducing substances, off odour, and helps you to get the actual purity of cooking oil. With 99%* neutralization capabilities, Oildok makes it possible for you to purify both the yet-to-be-used cooking oils and the ones you have already used.

With Oildok in your kitchen, your family will always have fresh, purified and guilt-free oil available for cooking, so you can cherish those meals with a smile of relief.

What are You Adding to Your Recipes - Health Risks or Oildok?

Oildok changes the form of your oil and balances the essential element for a healthy life.
