

ARTISANAL CLONES

Award-winning hemp flower is just one of the reasons we grow exclusively from our own clones. Here are the others:

Proven genetics. Our clones are cut from our elite, organically grown, non-GMO mother plants, cultivated right here at Nevada Crest Farms. No outside sources, ever. Third-party testing verifies the distinctive cannabinoid and terpene profiles our customers expect, at the concentrations the law allows.

Perfect health. Our proprietary mothers, meticulous procedures and pristine clone room conditions produce clones that are vigorous, well-rooted, and disease-, pest- and stress-free, preventing them from going to seed or tainting the grow.

True crop insurance. We breed exclusively feminized clones to ensure that our plants aren't pollinated. Pollination not only reduces CBD and flower yield, it raises THC levels out of compliance, which requires crop destruction in many states. (Unlike feminized clones, feminized seeds can still produce male plants. And it only takes a few.)

More return, less investment. When starting from our field-ready clones, there's no need to spend precious time and resources on housing, staffing and waiting for germination. Shorter grow cycles allow for more grows, more harvests and more revenue.

Predictable, repeatable results. To grow a business, you—and your customers—need to know that you can deliver on your promises every time. Clones provide the cannabinoid content, tasting notes and performance that you and your customers expect, when you expect it ... crop after crop, year after year.

Grow with us.

GROW FASTER.
GROW SMARTER.
GROW REVENUE.

ARTISANAL CLONES

TROPHY WIFE

Trophy Wife is a staple strain praised for its high CBD content. This rare, evenly-balanced hybrid brings full-body relaxation by helping loosen tense muscles and allowing you to drop your shoulders into a soothing mellow state. It's a great choice for post workouts or for those who suffer from muscle or joint pain. The strain is popularly used for medicinal properties that help curb a variety of physical ailments such as nausea, chronic pain, and migraines. Users often reach for the Trophy Wife when they find themselves struggling with restlessness at inopportune times.

No. of Clones: 2500

- > Hybrid Strain
- > Classic taste of hemp flower
- > Fast-acting

Scent: Sweet, fruity scent with a light sour touch of berries and a soft gassy note

CBD Ratio: 1:-1

β-Myrcene & β-Caryophyllene

Field Structure:

Resistant to hot and cold temperatures

Planting Density:

1,800-2,000 per acre

Flowering Time:

8-9 weeks

OPUS 1

While the Opus 1 is known for its relatively low potency, the strain remains popular because of its wide range of benefits. This modest strain is ideal for those who may suffer from restlessness, nervousness, and unease. The Opus 1 flower is able to offer non-psychoactive relief without the unwanted side effect of drowsiness. Your muscles will tend to feel less tension and stress as the Opus 1 flower works to calm your body and mind. The earthy aroma of this strain gives it a smooth herbal taste.

No. of Clones: 2500

- > Sativa
- > "Spicy"
- > Great strain for making full-spectrum oil
- > Known for its muscle/joint relaxation pain relief

Scent: Mild notes of earth with a hint of citrus
