FEEDING GUIDE

- Feed 2-4 times per day depending on fish size and water temperature and no more than the Koi eat within 5 minutes.
- The smaller the Koi, the more often they need feeding.
- The more you feed, the more waste the Koi will produce, resulting in more water changes/filter cleans required.
- Optimum growing temperature is 23c.
- Remove uneaten feed from the pond in case of overfeeding.
- At water temperatures below 10c Koi have a reduced appetite and slow digestion, therefore feed accordingly.
- Don't feed Koi if the water temperature is below 5c.
