Methodology

The survey was performed with 189 respondents who were asked to state which silicone product (A or B) they preferred as a treatment. They were also asked to motivate their choice. The identities of the test packs were hidden. The silicone gels were applied to the hand one after the other so that the respondents could experience the difference. The respondents included plastic surgeons, dermatologists, skin therapists, wound care nurses and randomly selected subjects.

WHEN DO YOU RECOMMEND BAPSCARCARE **GEL** ?

- Ideal for small scars
- Scars on face and neck
- Old and fresh scars
