EcoMed Disposable Curtains

EcoMed antimicrobial and flame retardant disposable cubicle curtains are the quick, economical and hygienic alternative to conventional cubicle curtains. EcoMed disposable curtains are made from 100% polypropylene, weighing far less than conventional curtains and so are easy and quick to fit and replace in less than 60 seconds.

EcoMed silver antimicrobial additives are not a spray-on, but built into the polymer structure of the non-woven fabric at the point of manufacture. The antimicrobial effect will last until the end of curtain's useful life and until recycled.

Ultra-Fresh antibacterial protection is built into disposable curtains to inhibit the growth of bacteria, mould or mildew that can cause stains, odours and product deterioration. When used in conjunction with good hygiene practices, Ultra-Fresh technology works between cleanings to inhibit the growth of these broad spectrum bacteria and moulds, reducing the risk of cross-contamination.
