Mask filter cutting guideline

Tilley

Follow the measurements below when cutting your
filter to fit in your face mask.

Instructions:

1 Print pattern onto paper.

2 Pin the pattern onto filter fabric.

3 Cut pattern from filter fabric. You can
cut more than one sheet of filter if desired.
NOTE: This will make your mask feel stiffer.

4 Insert the filter through the pocket opening
with the pointed part of the mask at the
top and push the filter in.

5 Once the filter is in the mask, adjust until flat.
NOTE: This patten is slightly narrower
than the mask, and should have
space on either end.

Cut pattern out along
the red dotted line
