

"Let light be your medicine"

SILICONE PADS NOW AVAILABLE

DEEP LIGHT THERAPY

Introducing our latest advancement in our professional light systems. This stand-alone light system uses advanced dual spectrum technology giving each light package the ability to dose 2 wavelengths. This allows the wavelengths in each package to be closer together, giving a more focused and targeted therapeutic delivery. Both wavelengths are infrared and penetrate deeper into the body providing strong circulatory and anti-inflammatory support. This helps to improve blood flow and oxygen delivery to the application area.

ADVANCING LIGHT TECHNOLOGY ONE SOURCE, 2 WAVELENGTHS
