

User Manual

MoonLight - 2, 3, 4

SunRise - 2, 3, 4

Thank you for choosing our SaunaTerra Series!

The Dry Traditional Sauna

Congratulations on the purchase of your brand new dry traditional sauna. Please carefully review and read through this material. Keep this manual and your proof of purchase for future reference and service calls.

WELCOME FRIENDS!

We are so delighted that you have decided to take control of your life and invest in the most important thing – your health.

Happy Detox!

Enlighten Sauna Team

What You Need to Prepare Before Installing the Sauna

1. Choose the right Outdoor space and clear it out for the sauna.
2. When determining a location for your sauna, please keep in mind the following:
 - The main power cord on the sauna must be easily accessible.
 - When facing the sauna, the cord is located behind the back wall in the lower left hand side corner.
 - The location must be dry and leveled.
3. You will need a solid and leveled base. The sauna cannot sit straight on the ground.
4. Check the Electrical requirements for your specific unit and make sure you have it available. Please contact an electrician if you require assistance with this.
5. For a traditional heating system: Hardwire is recommended. Plug can be sent separately if preferred.
6. Prepare a Sealant to seal the sauna during the Installation of the sauna.
7. Tools: Phillips screwdriver, flat screwdriver, sealant gun. An Electric screwdriver will speed up the process.
8. Print or have your manual available during the installation.
9. Tech support for installation is available only at a pre-scheduled time. Submit a ticket online to schedule a time prior to **72 hours** of installation.
10. If you plan to have an electrician on site before the sauna arrives, schedule a phone call with our technician at least 72 hours in advance for a pre-installation process questions.

Electrical Components/Requirements

Please Read Carefully!

Traditional Heating System/Harvia: Hardwire is recommended, if you opt for a plug, we will send you a plug for the BC45-E heater specs.

Each sauna will require a dedicated circuit when plugged into an outlet according to the chart below. A “dedicated circuit” requires that no other appliance should share the outlet/circuit with the sauna. Failure to comply with this requirement may cause an electrical interruption and/or a diminished performance. To avoid any potential electrical hazards, it is recommended that only a qualified electrician installs your dedicated electrical wiring for a proper sauna functionality. Please make sure that the sauna is properly grounded. Serious injury may result if the proper electrical requirements are not met.

WARNING! Keep the sauna away from any potential hazards, including any water source or liquids. Select a dry, suitable location for sauna installation. Should you have any questions, please do not hesitate to contact the supplier.

Power Plugs

Please read the following directions carefully.

Traditional Heating Technology requires: Hardwire. Hardwire is recommended, if you opt to a plug, we will send you the following plug for the BC45-E heater:

Power Usage/AMPS	
Hardwire:	
Wattage:	4500w
Voltage:	220/240 Volt
Amperage:	20 Amp minimum, 30 amp recommended*
Plug sent separately if requested:	

*Minimum 20 Amp is required for the dedicated circuit, if you run a new line we recommend for you to have 30 Amp available.

If you have upgraded to a different Harvia heater, the power requirements will be different. Please refer to the specifications of your particular heater.

Choosing Sauna's Location

Your Enlighten outdoor sauna can stand outside without any cover or protection. The sauna requires a solid and level surface that will not flood. The saunas are very heavy so a solid foundation is highly recommended.

While Enlighten Outdoor saunas are specifically designed to be placed outdoors, choosing a location without excessive rain and wind is recommended.

Installation requirements for your sauna are as follows:

1. Your Enlighten sauna is a self-contained and freestanding unit. It should not be built into any structure without prior authorization.
2. Any modifications made to the sauna can waive the warranty, please get authorization before proceeding.
3. Please maintain a minimum of **4-inch clearance** on all sides of the unit to allow air to circulate while giving access for the power cord.

Sealant Application

VERY IMPORTANT: Please follow these steps during installation as they are very important to ensure the sauna is properly installed.

1. Prepare before the installation and use similar sealant to prevent any leaks from happening:

2. Apply sealant on the sides (as shown on the images) as well as on the bottom and top of walls.

Cleaning and Maintenance

1. Before using your sauna for the first time, clean the inside of the sauna with a clean damp cloth.
2. Make sure to always keep the sauna dry and clean.
3. Use a clean damp towel. DO NOT use a towel that is too wet and can drip water inside the sauna and DO NOT use cleaning agents inside the sauna.
4. DO NOT leave towels, water glasses or bottles inside the sauna after use. Wipe the exterior surface of the sauna with a towel and clean the glass at least once a month.
5. Place a towel on the bench to absorb any perspiration. Wash these often to maintain a clean and pleasant environment inside your sauna.
6. Perspiration may darken the wood over time. This can be removed by a light sanding with fine grit sandpaper.

Wood Care

If the sauna exterior body has become scratched or scuffed, it could be concealed by using a small amount of furniture polish, oil or other furniture treatment. The interior blemishes, scratches, or scuffs can be either left alone, sanded or a combination of gluing plus sanding. Avoid any treatment containing benzene or a high concentration of alcohol.

Outdoor models' bodies need to be maintained on a regular basis (between 6 months to a year) by polishing or resealing the body as needed. If the varnish is cracked or worn off, sand the surface and re-varnish the affected area. Consult your local handyman or furniture repair professional for more details on how to maintain the wood in an outdoor environment. You can use any outdoor exterior clear wood sealer.

Sauna Installation Instructions

Please read the following directions carefully.

The sauna installation requires a minimum of 2 people, 5 person model sizes require at least 3 people to install. You should not try to install the sauna on your own as damage may easily occur. Please read the instructions thoroughly before and during assembly to ensure proper installation of the unit. If you encounter any problems or have questions during assembly, please feel free to call our Customer Support department at 1-888-877-2862.

Caution!

1. Install the sauna on a completely leveled surface.
2. Flammable objects and corrosive chemical substances should be kept far away from the sauna.

Please make sure that you open the boxes FACE-UP. Please be very careful when opening the boxes!

BOXES CONTAIN FRAGILE PARTS AND GLASS!

Please be careful when carrying and installing the glass pieces to avoid breakage.

Packaging

CONTENTS OF BOXES

1. Floor Panel.
2. Ceiling Panel
3. Accessories
4. Left Side Wall
5. Right Side Wall
6. Front Wall
7. Back Wall
8. Bench and Bench Support

- 9. Harvia Electric Heater, BC-45E
- 10. Outdoor Roof (SLOPE OR PEAK)

Location of Sauna & Installation Order

When determining a location for your sauna, please keep in mind the following:

- 1. The main power cord on the sauna must be easily accessible.
- 2. The location must be dry and level.
- 3. Panels should be installed in the following order:

1) Floor	4) Right Side Wall	7) Front Wall
2) Back Wall	5) Under Bench Support	8) Ceiling
3) Left Side Wall	6) Bench	9) Outdoor Roof

Sauna Assembly: Connecting the Panels. Panel Locking Systems

Each sauna offers two types of panel-locking systems to connect the different sides of the sauna. Please use the instructions below as a reference guide on how to connect the sauna panels.

Inner-Locking System:

The inner-locking system is designed to be completely invisible when the sauna is installed. The locks are built on the side of each panel and they connect by sliding one over the other (Figure G-2).

To connect two panels, follow these few steps:

1. Lift the panel with the male locks a few inches.
2. Push it against the opposite panel; make sure to apply pressure around the top and bottom corners.
3. Slide the panel down to lock it in place. Make sure all the locks are connected (top and bottom).
4. Inspect the panels and make sure they are leveled (the panel's top is flat and matching).

Figure G-1: Connect panels, inner lock system

Figure G-2: Inner-Locking System

Latch System:

The Latch Locking System is two brackets that lock together bypassing the main loop over the opposite side and locking latch (Figure G-3).

Figure G-3: Latch Locking System

Where to Start:

Lay the boxes flat on the ground and open them carefully. The accessories and smaller parts are located in the box that includes the top and bottom panels (Figure G-4).

Figure G-4: Open the box to uncover accessories

Sauna Assembly: Connecting the Panels Steps.

Step 1. Begin with the FLOOR PANEL Placement

Place the floor panel flat on the desired location. Make sure to leave a space around the sidewalls for one person to stand and install the side panels (Figure C-1). You can slide the sauna once it's complete next to a wall.

Tips:

- Check the trim for the bench on the floor to locate the proper positioning of the floor panel. The side where the bench is will be the back side of the sauna, where the X is shown in the picture.

Figure C-1: Floor Panel

Step 2. REAR PANEL Placement

Place the rear panel on the back end of the floor panel. At this point, someone should hold the rear panel until the next connection is made.

Step 3. LEFT PANEL Placement

Install the left panel (the left panel has 2-4 sockets on the lower end) as the image below. Make sure the top of both panels is flat and levelled.

Refer to “[Connecting the Panels](#)” section on how to lock the panels together.

Step 4 and 5. SIDE PANELS Placement

Connect the side panels to the back panel as in the image below (Figure C-2). Refer to “[Connecting the Panels](#)” section on how to lock the panels together.

Figure C-2: Rear and Side Panel

Sauna Assembly: Install HARVIA Heater BEFORE Installing the Bench and Other Panels.

Step 6. Heater Installation.

These instructions for installation and use are intended for the owner or the person in charge of the sauna, as well as for the electrician in charge of the electrical installation of the heater. After completing the installation, the person in charge of the installation should give these instructions to the owner of the sauna or to the person in charge of its operation. Please read the instructions for use carefully before using the heater.

The heater is designed for the heating of a sauna room to bathing temperature. It is not to be used for any other purpose. Sauna heaters equipped with CE signs meet all of the regulations for sauna installations. Proper authorities monitor that the regulations are being followed.

Congratulations on your choice!

Harvia Heater Manual, BC-45 E model

Attention:

The cables that come with your traditional heater are labelled as following:

"L" , "N", ↓

The following setup should be used for 220V connection:

"L" - HOT

"N" - HOT

↓ - Ground

For the installation of Harvia heater, please refer to these steps:

Step 1. When you step into the unit, you place the heater on the left side wall towards the front wall.

Step 2. There are three wires coming out of the floor on the left-hand side.

Step 3. You connect the wires to the heater.

Step 4. The other side of the three wires is coming out underneath the bench and goes out of the sauna on the lower left-hand side corner.

Step 5. Connect the plug to your outlet/power source.

Instructions For Harvia Heater Use

Piling of the Sauna Stones

The piling of the sauna stones has a great effect on the functioning of the heater (figure 1).

Important information on sauna stones:

The stones are provided with the sauna, but if you choose to buy additional stones, please see below:

- The stones should be 5–10 cm in diameter.
- Use solely angular split-face sauna stones that are intended for use in a heater. Peridotite, olivine-dolerite and olivine are suitable stone types.
- **Neither light, porous ceramic “stones” nor soft soapstones should be used in the heater. They do not absorb enough heat when warmed up. This can result in damage in heating elements.**
- Wash off dust from the stones before piling them into the heater.

Please note when placing the stones:

- Do not drop stones into the heater.
- Do not wedge stones between the heating elements.
- Place the stones sparsely to ensure that air can circulate between them.
- Pile the stones so that they support each other instead of lying their weight on the heating elements.
- Do not form a high pile of stones on top of the heater.
- No such objects or devices should be placed inside the heater stone space or near the heater that could change the amount or direction of the air flowing through the heater.

Figure 1. Piling of the sauna stones 44

Maintenance of the Stones

Due to large variation in temperature, the sauna stones disintegrate in use. Rearrange the stones at least once a year or even more often if the sauna is in frequent use. At the same time, remove any pieces of stones from the bottom of the heater and replace any disintegrated stones with new ones. By doing this, the heating capability of the heater stays optimal and the risk of overheating is avoided.

Heating of the Sauna

When operating the heater for the first time, both the heater and the stones emit a smell. To remove the smell, the sauna room needs to be efficiently ventilated.

If the heater output is suitable for the sauna room, it will take about an hour for a properly insulated sauna to reach the required bathing temperature.

The sauna stones normally reach the bathing temperature at the same time as the sauna room. A suitable temperature for the sauna room is about 65–80 °C, 149F-176F.

Using the Heater

Before switching the heater on, always check that there isn't anything on top of the heater or inside the given safety distance.

Heater models BC45E, BC60E, BC80E and BC90E are controlled from a separate control unit. See the instructions for use of the BC45E after the Sauna Installation instructions.

Step 7. BENCH Placement

Some saunas will include square bench support. Place it in front of the windows (Figure C-3).

Figure C-3: Bench Support

Step 1. Place the bench stand panels by lining up its side with the vertical guides on the rear panel. After placing the bench stand panel, connect the heaters' plugs.

Step 2. Slide the benchtop panel over the horizontal guide on the side panels. Make sure the smooth and finished side is facing up and forward (Figure C-4).

Step 3. Install the door handle at this point, before installing the front panel.

Figure C-4: Installing the Bench

Step 8. FRONT PANEL Placement:

(Note: Install the door handle before installing the front panel.)

Connect the front panel to both side panels as in the image below (Figure C-5). Refer to “Connecting the Panels” section on how to lock the panels together..

Tips:

- Make sure to align the corners of the two side panels and the edges of the front panel.
- If the lower locks are not connecting, make sure the bench stand is not blocking the panel by aligning it with the vertical guide.
- The front panel is heavy because of the glass door. At least two people are needed to lift it.
- For the inner locking system, a person can stand inside the sauna to align the edges and corners of the panels.
- For the inner locking system, make sure to put pressure on the top and bottom corners of each side to ensure the locks are connecting.

Figure C-5: Front Panel

Step 9. TOP PANEL Placement:

Step 1. Raise the top panel over the sauna body. Insert the wires for the control panel, temperature sensor, and heaters through the openings in the ceiling.

Step 2. Connect the control panel wire (white ribbon) and the heat sensor (2-pin wire) on top of the sauna. In order to connect the cables just follow the labels on the cables.

Step 3. Connect the heaters' plugs into the control box. Even though the heaters' plugs might be labeled, they can connect into any sockets on the control box (Figure A-6).

Figure A-6: Top Panels and Connections

Note: Accessories installation instructions continue below the outdoor models.

If you bought an Indoor Version, the Top Panel is your Indoor Roof. Skip OUTDOOR ROOF ASSEMBLY INSTRUCTIONS.

If you bought an Outdoor Version, please proceed with the OUTDOOR ROOF ASSEMBLY INSTRUCTIONS.

OUTDOOR ROOF ASSEMBLY INSTRUCTIONS

Step 10. Roof Placement.

PEAK ROOF

Main Support

Place the roof bottom section on top of the sauna and screw the center support beam (Figure D-1). The illustration below will not include the sauna's body, but the roof should be installed on top of the sauna.

Figure D-1: Roof bottom section and center support beam

Roofing Shingles Support

Install the roofing shingles support beams around the top. Each beam is labeled alphabetically to a matching corner or side (Figure D-2). For example, the beam marked with “A” should be screwed into the “A” corner. Repeat for all the corners and sides (based on the model, you might have eight or six supporting beams).

Figure D-2: Shingles Support Beams

Screw the triangular roofing shingles on the supporting beams (Figure D-3). Repeat for all sides.

Figure D-3: Roofing Shingles

Roof Sealing

Screw the corner roof shingles around all corners. Each corner will have two shingles curved upward to easily identify the position of the screw (Figure D-4).

Figure D-4: Corner Roof Shingles

After screwing in the corners, flatten the curved shingles and place the pyramid roof shingles on top (Figure D-5).

Figure D-5: Pyramid Roof Shingles

SLOPE ROOF

CAUTION!

BEFORE PLACING THE SLOPE ROOF, MAKE SURE THAT EVERYTHING IS WORKING AND CONNECTED PROPERLY ON THE CEILING.

If you had something damaged or had any issues, please call our technical department and wait till you get everything resolved and working properly before placing the roof. The roof is heavy and it will be hard to remove it in order to install parts.

Digital Controller for BC45E

Heater models BC45E, BC60E, BC80E and BC90E are controlled from a separate control unit. See the instructions for use of the BC45E control unit model.

V.3

#	Function	#	Function
1	Power Button (On/Off)	7	Fahrenheit Light
2	Timer/Sound Control (reduce)	8	Bluetooth connected light
3	Timer/Sound Control (increase)	9	Lights Button/Pause

4	Temperature Control (increase)	10	USB connect interface
5	Temperature Control (reduce)	11	Settings control
6	Celsius Light		

Setting the Temperature

The purpose of the thermostat is to keep the temperature in the sauna room on a desired level. By experimenting, you can find the setting that suits you best.

Throwing Water on Heated Stones

The air in the sauna room becomes dry when warmed up. Therefore, it is necessary to throw water on the heated stones to reach a suitable level of humidity in the sauna. The effect of heat and steam on people varies – by experimenting, you can find the levels of temperature and humidity that suit you best.

NOTE! The maximum volume of the ladle is 0.2 litres. If an excessive amount of water is poured on the stones, only part of it will evaporate and the rest may splash as boiling hot water on the bathers. Never throw water on the stones when there are people near the heater, because hot steam may burn their skin.

NOTE! The water to be thrown on the heated stones should meet the requirements of clean household water (table 1). Only special aromas designed for sauna water may be used. Follow the instructions given on the package.

Water property	Effect	Recommendation
Humus concentration	Colour, taste, precipitates	<12 mg/l
Iron concentration	Colour, odour, taste, precipitates	<0,2 mg/l
Hardness: most important substances are manganese (Mn) and lime, i.e. calcium (Ca).	Precipitates	Mn: <0,05 mg/l Ca: <100 mg/l
Chlorinated water	Health risk	Forbidden to use
Seawater	Rapid corrosion	Forbidden to use

Table 1. Water quality requirement

ACCESSORIES

Cup Holder (Optional)

The cup holder is a small wooden table that can be screwed in one of the front corners (either right or left, based on the user preference). Make sure not to install the cup holders on or in front of the heaters. Some models with a glass front or corner saunas will not include the cup holder.

Magazine Holder (Optional)

The magazine holder can be installed either on the front wall (in front of the window) or in the sidewall (next to the legs) (the placement of the magazine holder is optional based on the user preference). Do NOT install the magazine holder in front of the heaters. The magazine holder size might vary based on the model.

Towel Rack (Optional)

For models with full glass doors, the towel rack can be installed either on the front wall or in the sidewall (the placement of the towel rack is optional based on the user preference). Do NOT install the towel rack in front of the heaters.

For models with glass and wooden frame doors or wooden doors, install the towel rack in the middle of the door frame and use it as a door handle.

AM/FM RADIO/MP3 player, BLUETOOTH should all be pre-installed on the key pad.

Color Therapy Lights (Recommended)

Some models will include color therapy lights (or chromo lights aka chromotherapy). Color therapy lights function as light therapy for physical and mental health. Scientists have determined that each color emits a frequency.

Our body consists of Seven Layers of the Auric Field and the Seven Chakras (energy centers of the body). Each layer looks different and each has its own particular function. Each layer of our Aura is associated with a chakra (1st layer with 1st chakra, and so on). See a chart below:

Chakra – Root Chakra (RED)

Location: The end of the spine, between the anus and the sexual organs

Function/Qualities: Security/Safety, Stability

Function when disturbed/unhealthy: Fear, insecurity. Life feels like a burden. Feeling of not belonging.

Physical Health: Weak constitution, elimination problems. Reduced physical and mental resistance.

2nd Chakra – Sacral Chakra (ORANGE)

Location: The Sexual Organs

Function: patience, Healthy/Positive Emotions towards Sexuality, Creativity, Responsible Relations

Function when disturbed/unhealthy: Rigid emotions, frigidity, guilt, no boundaries.

Physical Health: Problems with reproductive organs, kidneys.

3rd Chakra – Navel (YELLOW)

Location: Navel Point – Solar Plexus

Function/Qualities: Center of personal power and commitment;

Self-esteem, dignity, identity, judgment.

Place of inner balance and inspiration. Function when disturbed/unhealthy: Anger, greed, shame, despair;

No strength or spontaneity. Conforming in order to be recognized;

Suppressing one's own wishes/emotions to please others.

Physical Health: Problems with digestion, the liver, gallbladder, the pancreas.

4th Chakra – Heart Chakra (GREEN)

Location: The middle of the chest on the breast bone.

Function/Qualities: Compassion, kindness, forgiveness, service, love

Function when disturbed/unhealthy: Grief, Attachment, Easily Hurt. Emotional dependence on others. Heartlessness.

Physical Health: Heart problems, lung problems, blood pressure problems.

5th Chakra – Throat Chakra (LIGHT BLUE)

Location: The throat

Function/Qualities: Language; Ability to communicate effectively; Authenticity; Inspiring, teaching.

Function when disturbed/unhealthy: Lethargy, weakness in expressive abilities; Shyness, voice problems, insecurity, fear of others' judgments/opinions.

Physical Health: Throat, neck, thyroid problems.

6th Chakra - Third Eye (INDIGO BLUE)

Location: Between the eyebrows.

Function/Qualities: High Intuition; Clairvoyance; Visualizing; Fantasizing; Concentration and determination; Self-Initiation; Power of projection; Understanding your purpose.

Function when disturbed/unhealthy: Confusion, Depression. Rejection of spirituality; Over-intellectualizing.

Physical Health: Depression, Panic, Mental Disorders.

7th Chakra - Crown Chakra (VIOLET)

Location: Crown of the head.

Function/Qualities: Spiritual Connection; Connection to the Higher Self; Unity; Enlightenment; Universal Awareness

Function when disturbed/unhealthy: Grief; Feeling of being separated from existence/abundance. Fear of death. Mental Health: Complete separation and dis-illusion from oneself; grief, sadness, false/limiting beliefs.

8th Chakra - Aura (WHITE)

Location: The electromagnetic field (contains all colors above)

Function/Qualities: Aura combines all the effects of the chakras and offers their projection. Aura projects and protects.

Function when disturbed/unhealthy: Shy, withdrawn, vulnerable.

Physical/Mental Health: Overall weakness in mind and body.

Operating Instructions:

The color lights are operated by remote control only. Press any color on the remote control to turn the lights on and select a color. You may then press the "Cycle" button (lower right button) to cycle through the colors randomly. Press the "Power" button to turn the lights off.

OTHER ACCESSORIES:

Bucket with ladle

Analog Thermostat

Rocks

Sand Timer/Hourglass Clock Wall for Sauna

Usage Guide

Precautions and Warnings!

- If the temperature becomes unbearable, decrease the temperature or shut off the sauna immediately.
- Do not use it if pregnant or have serious inflammation, fever, a communicable disease, acute bleeding, or are intoxicated.
- Do not splash water on any electrical component inside the sauna other than the harvia heater rocks itself.
- Do not bring wet towels into your sauna or any substances that could harm the interior of your sauna.
- Do not install a lock on your sauna.
- All repairs need to be authorized by the supplier 's representative; otherwise, the product warranty may be voided.
- Staying in the hot sauna for long periods of time makes the body temperature rise, which may be dangerous.
- Keep away from the heater when it is hot. The stones and outer surface of the heater may burn your skin.
- Keep children away from the heater.
- Do not let young, handicapped or ill people bathe in the sauna on their own.
- Consult your doctor about any health-related limitations to bathing.
- Consult your child welfare clinic about taking little babies to the sauna.
- Be very careful when moving in the sauna, as the platform and floors may be slippery.
- Never go to a hot sauna if you have taken alcohol, strong medicines or narcotics.
- Never sleep in a hot sauna.
- Sea air and a humid climate may corrode the metal surfaces of the heater.
- Do not hang clothes to dry in the sauna, as this may cause a risk of fire. Excessive moisture content may also cause damage to the electrical equipment.

Instructions for Bathing

- Begin by washing yourself.
- Stay in the sauna for as long as you feel comfortable.
- Forget all your troubles and relax.
- According to established sauna conventions, you must not disturb other bathers by speaking in a loud voice.
- Do not force other bathers from the sauna by throwing excessive amounts of water on the stones.
- Cool your skin down as necessary. If you are in good health, you can have a swim if a swimming place or pool is available.
- Wash yourself after bathing.
- Rest for a while and let your pulse go back to normal. Have a drink of fresh water or a soft drink to bring your fluid balance back to normal.

Sauna and Contraindications

Sauna and Medications

Individuals who are using prescription drugs should seek the advice of their personal physician or pharmacist for possible changes in the drug's effect when the body is exposed to elevated body temperature. Diuretics, barbiturates, and beta-blockers may impair the body's natural heat loss mechanisms. Some over the counter drugs such as antihistamines may also cause the body to be more prone to heatstroke.

Sauna and Children

The core body temperature of children rises much faster than adults. This occurs due to a higher metabolic rate per body mass, limited circulatory adaptation to increased cardiac demands and the inability to regulate body temperature by sweating. Consult with the child's Pediatrician before using the sauna. Sauna is NOT recommended for small children!

Sauna and the Elderly

The ability to maintain core body temperature decreases with age. This is primarily due to circulatory conditions and decreased sweat gland function. The body must be able to activate its natural cooling processes in order to maintain core body temperature. Please consult with your physician prior to use.

Sauna and Cardiovascular Conditions

Individuals with cardiovascular conditions or problems (hypertension/hypotension), congestive heart failure, impaired coronary circulation or those who are taking medications, which might affect blood pressure, should exercise extreme caution when exposed to prolonged heat. Heat stress increases cardiac output, blood flow, in an effort to transfer internal body heat to the outside environment via the skin (perspiration) and respiratory system. This takes place primarily due to major changes in the heart rate, which has the potential to increase by thirty (30) beats per minute for each degree increase in core body temperature.

Sauna and Alcohol

Contrary to popular belief, it is not advisable to attempt to "Sweat Out" a hangover. Alcohol intoxication decreases a person's judgment; therefore they may not realize it when the body has a negative reaction to high heat. Alcohol also increases the heart rate, which may be further increased by heat stress.

Sauna and Chronic Conditions / Diseases Associated With a Reduced Ability to Sweat or Perspire

Parkinson's, Multiple Sclerosis, Central Nervous System Tumors and Diabetes with Neuropathy are conditions that are associated with impaired sweating.

Sauna and Hemophiliacs / Individuals Prone To Bleeding

The use of saunas should be avoided by anyone who is predisposed to bleeding.

Sauna and Fever

An individual that has a fever should not use any type of sauna.

Sauna and Insensitivity to Heat

An individual that has an insensitivity to heat should not use any type of sauna.

Sauna and Pregnancy

Pregnant women should consult a physician before using any type of sauna because fetal damage can occur with certain elevated body temperature. Therefore, the sauna is NOT RECOMMENDED for use by pregnant women.

Sauna and Menstruation

The heating of the low back area of women during the menstrual period may temporarily increase their menstrual flow. Some women endure this process to gain pain relief commonly associated with their cycle whereas others simply choose to avoid saunas use during that time of the month.

Sauna and Joint Injury

If you have a recent (acute) joint injury, it should not be heated for the first 48 hours after an injury or until hot and swollen symptoms subside. If you have a joint or joints that are chronically hot and swollen, these joints may respond poorly to vigorous heating of any kind. Vigorous heating is strictly contraindicated in cases of enclosed infections, be they dental, in joints or in any other tissues.

In the rare event, you experience pain and/or discomfort, immediately discontinue sauna use.

Troubleshooting

The sauna doesn't power on:

- Make sure the power cord is securely connected to the power socket and the control box (located under the bench).
- Make sure the breaker did not turn off.
- Make sure the control panel white ribbon wire is securely connected.
- Make sure the power socket is working by trying a different device on the same socket.

Light is not working:

- Replace the light bulb.

Color therapy light does not work:

- Make sure the battery is inserted correctly.
- Make sure to point the remote directly at the remote receiver (small rounded tip next to the color lights).
- Try a new battery.

Heater is not working:

- Make sure to connect the heater's plug securely to the control box (located under the bench).
- Make sure the plug behind the heater is connected (you would need to unscrew the heater).

Harvia Heater Troubleshooting

Note! All service operations are recommended to be done by a certified electrician.

The heater does not heat.

- Check that the fuses to the heater are in good condition.
- Check that the connection cable is connected.
- Turn the timer switch to the "on" section.
- Turn the thermostat to a higher setting.
- Check that the overheat protector has not gone off. The timer works but the heater does not heat.

The sauna room heats slowly. The water thrown on the sauna stones cools down the stones quickly.

- Check that the fuses to the heater are in good condition.

- Check that all heating elements glow when the heater is on.
- Turn the thermostat to a higher setting.
- Check that the heater output is sufficient.
- Check the sauna stones. Too tightly piled stones, the settling of stones with time or wrong stone type can hinder the air flow through the heater, which results in reduced heating efficiency.
- Check that the sauna room ventilation has been arranged correctly.

The sauna room heats quickly, but the temperature of the stones remains insufficient. Water thrown on the stones runs through.

- Turn the thermostat to a lower setting.
- Check that the heater output is not too high.
- Check that the sauna room ventilation has been arranged correctly.

Panel or other material near the heater blackens quickly.

- Check that the requirements for safety distances are fulfilled.
- Check the sauna stones.
- Too tightly piled stones, the settling of stones with time or wrong stone type can hinder the air flow through the heater, which may result in overheating of surrounding materials.

The heater emits smell.

- See section Heating of the Sauna.
- The hot heater may emphasize odours mixed in the air that are not, however, caused by the sauna or the heater. Examples: paint, glue, oil, seasoning.
- Occasional bangs are most likely caused by stones cracking due to heat.
- The thermal expansion of heater parts can cause noises when the heater warms up.

Control panel display is unusual:

- If the control panel temperature display is over 189, make sure to connect the heat sensor securely.
- If the control panel time display is -- (two dashes), the sauna is in continuous working mode. Press the timer button to return to the timed working mode.

FM/USB/AUX/MP3/BLUETOOTH PLAYER WITH SPEAKERS is not working:

- If the radio has a bad reception, extend the antenna outside the sauna roof.
- If the USB cannot read an MP3 player, use an Aux-In plug and play the music from the MP3 player.

Warranty Information

Enlighten Saunas warrants its products to be free of defects in material and workmanship.

This warranty extends only to:

1. a retail purchaser of a sauna or parts directly from the supplier;
2. the authorized wholesale purchaser of a sauna or parts directly from the supplier; or
3. a retail purchaser of a sauna or parts from an authorized wholesaler.

However, in the event of a sale, transfer or conveyance of a sauna or parts from any of the three (3) proceeding persons or entities, any rights, duties, and obligations associated with this warranty shall be null and void and of no further force and effect. The sauna or parts must be purchased and used within one year of the manufactured date.

The controls, electrical parts and wiring must be kept dry at all times and not exposed to any water or liquids.

Under no circumstances will the manufacturer be liable for any special or consequential damages arising from the use of the product, its components and/or parts installed with or attached to it. The manufacturer is not liable for any injury to any persons or any claims of such that may be arising from the use, installation, and/or the service (repair) of the product.

The purchaser must establish the date of purchase, by dated sales slip, invoice or delivery receipt.

Outdoor-Residential Use:

A warranty shall not apply to any product or a component used for any industrial, rental, professional or neglect, accident, abuse, improper installation and/or reckless operation by the purchaser, including but not limited to: exposure to a fire or excessive heat, and other hazardous elements/activities. (Please refer to an instruction manual on proper usage).

For the coverage period specified (“warranty period”), Company agrees to replace, at its sole option, the products listed above, subject to and solely in accordance with the terms, conditions, exclusions, and limitations set forth herein. The warranty covers parts only, labor is not included.

The warranty covers manufacturing defects in materials and workmanship encountered in normal use of this product, and shall not apply to the following, including, but not limited to: damage which occurs in shipment; delivery and installation; applications and uses for which this product was not intended; altered product or serial numbers; cosmetic damage or exterior finish; accidents, abuse, neglect, fire, water, lightning or other acts of nature; use of products, equipment, systems, utilities, services, parts, supplies, accessories, applications, installations, repairs, external plumbing and leaks, external wiring,

circuit breakers, fuses or connectors not supplied and authorized by the supplier, or which damage this product or result in service problems; incorrect electrical line voltage, fluctuations, and surges; customer adjustments and failure to follow operating instructions, cleaning, maintenance and environmental instructions that are covered and prescribed in the instruction book; consumable items including light bulbs.

Enlighten Saunas® shall not be liable for the loss of use of the sauna or other incidental or consequential damages. Under no circumstances shall the supplier or any of its representatives be held liable for injury to any persons or damages to any properties. Specifications are subject to change without notice.

Enlighten Saunas® uses the highest quality wood in our product lines. All structures using wood are susceptible to minor dents, scratches, and scuffing. This is normal and will not affect the integrity or operation of your sauna.

Wood is a living material that continues to respond to climate conditions, even after being manufactured into a sauna. Variations in color or grain, and irregularities such as fine cracks are part of the natural beauty of the wood and in no way should be considered defects. During normal operation, wood may crack slightly due to the changes in moisture level. This will not affect the structural integrity of the sauna.

Prior to shipping, the wood is inspected for consistency, color, and quality. Our saunas are shipped around the globe and can experience slight blemishes, scratches or scuffs in transit. In most cases, these blemishes on the exterior of the sauna can be concealed by using a small amount of furniture polish, oil or other furniture treatment. The interior blemishes, scratches, or scuffs can be either left alone, sanded or a combination of gluing plus sanding. Please avoid any treatment containing benzene or a high concentration of alcohol.

ATTENTION:

Shipping damage must be notated on the Bill of Lading (BOL). The Supplier must be notified of any damage to your sauna within three (3) business days of signing the BOL. Failure to notify the supplier within the established time frame will result in the owner taking full responsibility for the cost of ALL REPLACEMENT PARTS including shipping and handling fees.
