

# CONCEALED PIVOT BRONZE

EN

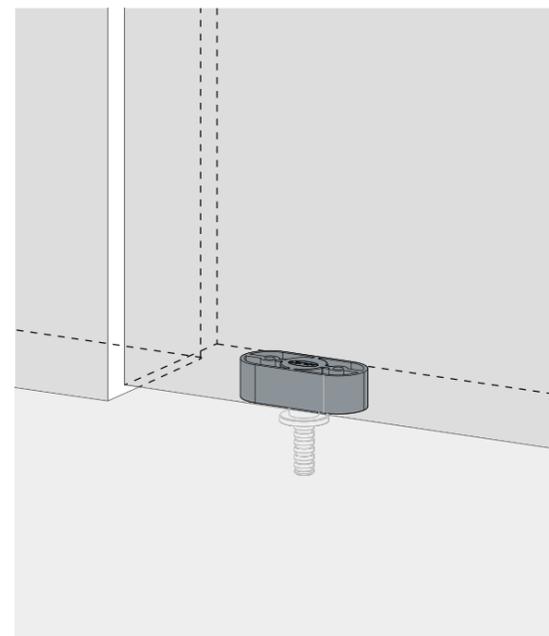

Bronze bearings have been performing satisfactorily for decades, even under severe operating conditions. For this reason JNF has incorporated them in this range of door pivots, ensuring long life and no noise even after several years and cycles.

As a big advantage, this range can solve different types of installations, from the model completely invisible to the model that we can use the door frame as bottom pivot support, without any hole on the floor. Also allows big flexibility in the installation in the door, from 50mm up to the centre of the door.
